B9a. Architect: Max Maltzman  b. Builder: California Realty Corporation

*B10. Significance: Area: Los Angeles  Theme: 

Period of Significance: 1941  Property Type: Apartment  Applicable Criteria: A/1, C/3

This property currently contains 5 buildings. In 1941, permits were issued to owner California Realty Corporation of 739 Highland Ave for erection of a 2-story, 284-room apartment building and two 1-room garages, located at the NW corner of Gower St and Lexington Ave. The architect was Max Maltzman, the engineer was J.E. Mackel and the contractor was Halper Construction Corporation. Total valuation of proposed work was $192,000. (LA Building Permit No. 10848-10850).

This courtyard apartment appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its...(continued on next page)

B10. Statement of Significance (continued): association with important Los Angeles architect Max Maltzman. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. The construction of courtyard housing allowed speculative landowners to develop their parcels at higher densities than that afforded by the construction of a single family home. Courtyard apartments, arranged around a central landscaped area, allowed tenants exterior space that provided additional privacy. This property is two stories in height and constructed in a popular period revival style.

Max Maltzman was a prolific local architect who is best known for his luxury, multifamily apartment buildings, including the Ravenswood at 570 N. Rossmore Avenue, 410 N. Rossmore Avenue and the Charmont Apartments in Santa Monica (listed in the National Register). Later in his career in the 1950s, Max Maltzman designed tract homes, such as Orangewood Estates in Fullerton and Hollypark Knolls in Inglewood.

B10. Statement of Significance (continued): residence. With a front gable spanning the two central entrances, this property articulates the decorative elements of the primary façade with a visual cohesiveness suggestive of a single family residence.

This property is also a notable example of Folk Victorian style, exhibiting most character-defining features, including a porch with spindlework; tall narrow windows that extend their verticality into dormers; wide, flared eaves with exposed rafter tails, and Gingerbread trim in the porch gable. Building permits were not available for the property.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

The property was built by Gus Schumacher around 1924. Original building permits were not available. According to the 1920 Federal Census, Gus Schumacher was of German descent and worked as a clerk in a studio. This bungalow court is significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Designed in a Mediterranean Revival style, the property exemplifies character-defining features of a bungalow court including multiple, semi-dethatched buildings on a single residential lot arranged around a landscaped courtyard.

DPR 523A (1/95) *Required Information*
In 1923, permits were issued to owner Thos H. Heggens of 1147 Gordon Street for erection of a 2-story, 20-room, 4-family apartment building and 2 private garage buildings located at 1147-49 Gordon Street. The architect/contractor was D.F. Hancock of 4009 West 7th St. Total valuation of proposed work for the apartment building was $12,000 and for the garages was $500 and $150. (LA Building Permit No. 52566, 52567, 9342). The same owner and architect are responsible for design and construction of a similarly styled 1925 apartment building located at 1257-1263 N. Bronson Ave.

This flan is significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood...(continued on next page)
B10. Statement of Significance (continued): that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence. This property, designed in a Spanish Colonial Revival style, articulates decorative elements of the primary façade with a visual cohesiveness suggestive of a single family residence. Specifically a central tower element unites the façade.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

5 buildings are extant on the property located at 1141 Gordon. The earliest building, located at the rear of the lot, was constructed circa 1916. A permit for erection of the 1-story, 8-room duplex was issued to owner Laura Smith of 804 Union Oil Building on September 5, 1918. Total valuation of proposed work was $1,800 (LA Building Permit No. 5095). This dwelling, originally situated at the front of the lot, was moved to the rear of the lot by owner W. Lindsay of 710 Wright Callendev Building in 1928 to make way for four new residential buildings (LA Building Permit No. 1081). In the same year, Lindsay was issued permits for erection of the four residential buildings, each a 1-story,...(continued on next page)

Period of Significance: 1922 - 1964
Property Type: Commercial
Applicable Criteria: A/1

This property appears significant as one of the last remaining major motion picture and sound-studio support building. Established in 1919, the Cinema Mercantile Exchange primarily rented props to Keystone Studio. The 1942 City Directory lists 29 "Motion Picture Apparatus and Supplies." Of those, only three were located in the project area. Constructed in 1922, the Cinema Mercantile Company continues to supply props for studios, although under different ownership. Construction history is unknown. Although the property appears to have been altered around 1956, the property appears to retain sufficient integrity to convey its significance. The company also uses a building...(continued on next page)

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of... (continued on next page)

DPR 523B (1/95)

This property, constructed a year before Hollywood was annexed to Los Angeles, is designed in a Craftsman style, the most popular style of this period, and exhibits most character-defining features including a low pitched roof with exposed rafters and decorative fascia, broad front porch, decorative art glass, wood shingle siding and wood casement windows. Building permits were not available for the property.

P3a. Description (continued): integrity: high, setting, location, materials, workmanship, association, design, feeling
The apartment building located at 5827 Lexington Avenue was originally designed in 1962 to house 10 dwelling units for owner John Montallano and Jonas Zigaing & Catalano of 2340 Outpost Drive. The building was constructed at a cost of $80,000. (LA Permit No. 16809; LA 16810). This postwar multifamily apartment building appears significant for its highest quality of architectural design and exemplifies its property type. Two stories in height over partially submerged parking, the property features applied arches across half the façade, while a sculptural internal stair is visible though a glass curtain wall.

Department of Building and Safety, LA Permit No. 16809; LA 16810, August 10, 1962.

Period of Significance: 1929 Property Type: Multi-family Resident Applicable Criteria: A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

A permit was issued in 1929 to owner J.G Hauseman (name difficult to read on permit) of 1523 McCadden Place for erection of a 2-story, 30-room, 10-family apartment located at 5830 La Mirada No architect or contractor are listed on the permit. Total valuation of proposed work was $22,000. (LA Building Permit No. 5504).

This flat is significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods...(continued on next page)

B10. Statement of Significance (continued): comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence. This property, designed in a Spanish Colonial Revival style, articulates decorative elements of the primary façade with a visual cohesiveness suggestive of a single family residence. Specifically a central tower element unites the façade.

Update Status: Retains Integrity
The Egyptian Revival Karnak Apartments were constructed in 1925 for owner A.S. Tyler of 241 N. Western Avenue at a cost of $50,000. The architect and contractor were J.M. Close of the same address. J.M. Close also designed several of the Karnak's "twins", including the Ahmed Apartments, located within the Hollywood Redevelopment Area at 5616 Lexington Avenue, the Sahara Apartments, located at 1020 S. Kingsley Drive, and a 2-story mini-version of the same building located immediately across the street from the Sahara Apartments. John M. Close was an architect, contractor, and realty broker. He is listed in the 1920 Census as 38 years old, from New York, residing at 1807 Vernon Avenue,... (continued on next page)

*B12. References: 

"Spanish Artist on Visit Here", LA Times 28 Feb 1931, A5. 
1920 United States Federal Census.

B13. Remarks:

*B14. Evaluator:  Jenna Snow

*Date of Evaluation:  02/02/2009
B10. Statement of Significance (continued): married to Edna R. of California, with one son and one daughter.

According to the 1930 Census, approximately 12 of the residents of the Karnak worked in the motion picture industry, employed as actors, musicians, and art directors. In addition, among the early residents of the Karnak was Jose Samaniego, Spanish artist and editor of the Prensa de Madrid, a leading illustrated weekly publication in Spain, who lived at the Karnak while visiting the Hollywood area for one year to study American filmmaking as a representative of the Spanish government ("Spanish Artist on Visit Here", LA Times 28 Feb 1931, A5).

The Karnak Apartments appear significant both as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its relatively rare and distinctive architectural style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

Designed in an Egyptian Revival style, the property exhibits character-defining features of the style, including a monolithic structure with lotus-topped pilasters and Egyptian iconography. The style represents an exuberant period of expansion during the 1920s fueled by the explosive popularity of motion picture industry. Not only was the property inhabited by residents connected to the motion picture industry, the building itself provided entertainment for passers-by that invited their participation and reproduction of the city's self-image as a playful, fantastical paradise.

Period of Significance: 1927  Property Type: Multi-family Resident  Applicable Criteria: A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1927, a permit was issued to owner Sam Polakof of 1123 Guaranty Building, Hollywood for erection of a 4-story, 40-family, 72-room apartment building located at 5607 La Mirada. Total valuation of proposed work was $60,000. The architect was Arthur Le Brun and the contractor was Victor Polakow of 1123 Guaranty Building in Hollywood (LA Permit No. 13910). According to the 1929 LA City Directory and articles in the Historic Los Angeles Times, the historic name for the building was the "Rosemar Apartments."

Arthur Le Brun is an important local architect, designing a number of apartment buildings throughout Los Angeles, including: a 5-story apartment building on the corner of 20th and...(continued on next page)

B10. Statement of Significance (continued): Arlington streets in 1928, the 6-story Marlinrox Apartments, located at 938 South Lake Street in 1930, a frame and stucco construction apartment building located at 1505 North Cahuenga Avenue in 1927, and a 5-story apartment building on Hayworth near Fountain Avenue in 1925.

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

(Describe importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This single-story, 6-room, 2-family dwelling (duplex) was constructed in 1922 for owner Connie H. Rissmaun of 5542 La Mirada at a cost of $4,000 (LA Permit No. 12463). There is no architect listed on the original building permit but the contractor is listed as Olin J. Cope of 5502 Santa Monica Blvd. The Olin J. Cope Company was also the general contractor for a seven-room Spanish Revival dwelling in Hollywood on Primrose Avenue, designed by Scott Quintin and Tom Kerr of Alhambra Architects.

This duplex appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a...(continued on next page)

B10. Statement of Significance (continued): rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence. Designed in a Craftsman style, the primary façade is broken down by placing entry porches on opposites sides of the elevation so that individual units recall the imagery of an individual single-family residence.

This lot currently contains 3 buildings: a larger apartment building fronting Lexington and a 3-room garage and smaller multi-family building fronting St. Andrews Place. Original building permits for the two residential buildings indicate that both dwellings originally had addresses on St. Andrews Place. Two permits were issued in 1924 to erect an 8-room, single family residence and a 2-room garage at 1208-1210 St. Andrews Place for owner contractor Weston W. Shay of 1636 Crescent Place. The architect listed on the permit is Robert Ferrington. The total cost of construction of the residence was estimated at $9,000 and cost of construction of the garage was estimated at $200 (LA...(continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): Building Permit No. 38161). Two permits were issued in March of 1927 to erect a 10-room, 2-family dwelling on the lot located at 1208-1210 N St Andrews Place for owner K.M. Lange of 5552 Santa Monica Blvd. The architect was Eldo Chrysler and the contractor was GG. Lange of 1118 Orange Grove Ave (Lange's first initials are difficult to read on the original permit and may not be "G.G."). The total cost of construction was estimated at $6,000. A permit was issued in the same year for construction of a $200, 3-room garage on the same lot but with the address 5541-47 Lexington Avenue (LA Building Permit No. 08452, 2453). According to Sanborn maps, the larger building was converted to flats, while the smaller one was used as a duplex.

This property appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence. Designed in a Mediterranean Revival style, decorative elements of the primary façade of the flats - the centrally located entries balanced on either side by porches - creates a visually cohesive composition to suggest a single family residence.

This duplex appears significant both as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its unusual use of Craftsman style for a two story building. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period a couple of different strategies were employed to make their primary façade appear more like a single family... (continued on next page)

The property is also one of only a small handful of Craftsman buildings in Hollywood which makes use of the style for the much less common two-story variant. Popular from the early 1900s through the 1920s, the Craftsman style utilizes design elements of the Arts and Crafts style and represents a conscious search for the supposed simplicity of pre-Industrial times. The bungalow's simplicity of form, informal character, direct response to site, and extensive use of natural materials, was a regional interpretation of the socio-economic and aesthetic reforms espoused by the Arts and Crafts Movement's founder, William Morris. Although modest in size, this property demonstrates most character-defining features, including a low-pitched roof with wide eaves, exposed rafter tails, and venting under gable peaks. The property also displays character-defining features of wood shingle siding and a full-width front porch. Building permits were not available for this property.

The permit to erect this 20-unit apartment building was issued in 1956 for owners Edward Puskin and Harry Kalin of 5309 Knowlton Street at a cost of $67,000 (LA Permit No. 58459). No architect is listed on the permit. Edward Puskin & Son of 5309 Knowlton Avenue is listed as the contractor.

This postwar multifamily apartment building appears significant for its highest quality of architectural design and epitomizes its property type. Two stories in height, an exterior stair gives access to an exterior corridor covered by an extension of the gable roof, and a distinctive, multicolored dingb character and metal screen decorates the facade.

Los Angeles Department of Building and Safety, LA Permit No. 58459, November 21, 1956.

(This space reserved for official comments.)

This duplex appears significant both as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its unusual use of Craftsman style for a two story building. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period a couple of different strategies were employed to make their primary façade appear more like a single family...(continued on next page)
The property is also one of only a small handful of Craftsman buildings in Hollywood which makes use of the style for the much less common two-story variant. Popular from the early 1900s through the 1920s, the Craftsman style utilizes design elements of the Arts and Crafts style and represents a conscious search for the supposed simplicity of pre-Industrial times. The bungalow’s simplicity of form, informal character, direct response to site, and extensive use of natural materials, was a regional interpretation of the socio-economic and aesthetic reforms espoused by the Arts and Crafts Movement’s founder, William Morris. Although modest in size, this property demonstrates most character-defining features, including a low-pitched roof with wide eaves, exposed rafter tails, and venting under gable peaks. The property also displays character-defining features of wood shingle siding and a full-width front porch. Building permits were not available for this property.

( Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity. )

The original building permit for construction of the dwelling located at 5700 La Mirada is not available. The assessor date for construction of the building is 1909. Permits were issued in 1924 to turn the existing single family residence into a duplex for owner J.J. Stockebrand of the same address. Alterations cost a total of $800 and included addition of one partition and three doors and changing of one window (LA Building Permit No. 8528). Stockebrand was also issued a permit to construct a $375 new private garage on the property in the same year (LA Building Permit No. 33296).

Despite the 1924 alterations, this property continues to appear significant as an excellent example of...(continued on next page)

B10. Statement of Significance (continued): an increasingly rare property type. Properties from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of 1910. This building is designed in a Craftsman style, the most popular style of this period, and exhibits most character-defining features including low pitched gable roof with exposed rafter tails, wood clapboard siding and wood double-hung windows, and a wide front porch with a stone base.

Period of Significance: 1925  Property Type: Multi-family Resident  Applicable Criteria: A/1, C/3
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Originally constructed as a 60-room, 20-family apartment and hotel building at a cost of $55,000 for owner R.B. Stevenson, a realty broker, of 5616 Lexington Avenue. The architect was N.V. Whitfield and the contractor was J. M. Close (a designer and builder) of 241 Western Avenue (LA Perm No. 37235). While the Sanborn Map shows a 20-apartment, 20-room building, the original permit for erection of the building indicates that it is a 20-family, 60-room building and a Los Angeles Times article "Valuation Shows Big Price Rise," notes that the building is planned to be 40-units.

J.M. Close also designed several of the Ahmed's "twins," including the Karnak Apartments, located within the...(continued on next page)

B10. Statement of Significance (continued): Hollywood Redevelopment Area at 5617 La Mirada, the Sahara Apartments, located at 1020 S. Kingsley Drive, and a 2-story mini-version of the same building located immediately across the street from the Sahara Apartments. A builder/contractor named John M. Close is listed in the 1920 Census as 38 years old, from New York, residing at 1807 Vernon Avenue, married to Edna R. of California, with one son and one daughter.

According to the 1929 LA City Directory, early tenants of the Ahmed include: Edward L. and Eugene C. Ferrell, both occupied as film cutters, Louise M. Greenan, a nurse, and Edward Greenbaum (occupation unknown). According to the 1930 Census, residents included Clark B. Morris, a real estate salesman and Charles J. Webberson, a janitor.

The Ahmed Apartments appear significant both as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its relatively rare and distinctive architectural style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

Designed in an Egyptian Revival style, the property exhibits character-defining features of the style, including a monolithic structure with lotus-topped pilasters and Egyptian iconography. The style represents an exuberant period of expansion during the 1920s fueled by the explosive popularity of motion picture industry. Not only was the property inhabited by residents connected to the motion picture industry, the building itself provided entertainment for passers-by that invited their participation and reproduction of the city's self-image as a playful, fantastical paradise.

Period of Significance: 1932  Property Type: Multi-family Resident  Applicable Criteria: A/1, C/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1931, permits were issued to owner Mr. A.E. Thorson of 1626 Martel for erection of a 2-story, 26-room, 11-family apartment building and a 4-car garage located at 5623 Virginia Ave. The architect was Max C. Drebin and the contractor was Walter Hausler. Total valuation of proposed work was $14,500 for the apartment building and $450 for the garage. (LA Building Permit No. 22922, 22923)

This apartment building appears significant both as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its relatively rare and distinctive architectural style. Despite the pervasive...(continued on next page)

B14. Evaluator: Jenna Snow

*Date of Evaluation: 09/23/2008
B10. Statement of Significance (continued): American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

Designed in the relative rare Zigzag Moderne style, the property exhibits character-defining features of the style, including smooth stucco wall surfaces decorated with zigzags and other stylized geometric motifs, and pilasters emphasizing verticality. Though comparatively rare, and in vogue for not much more than a decade, this style was highly influential because it embodied the integration of four unlikely features unique to Los Angeles: changing patterns of land use; a popular response to early 20th Century progress and technology; the birth of new industries; and a sense of fantasy fueled by Hollywood and the movie industry that propelled the City's myths and legends.

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

Theme: Multifamily Development in Hollywood, 1911-1945; Context: Architecture, Engineering and Designed Landscapes, 1913-1945

Period of Significance: 1932

Property Type: Multi-family Residential

Applicable Criteria: A1, C3

In 1932, a permit was issued to owner Rhea Estella Falk of 1208 Pershing Bldg. for erection of a 2-story, 25-room, 6-family apartment building: 5412-5414 1/2 La Mirada Ave. Total valuation of proposed work was $16,000. No architect is listed on the permit. The contractor was Pac Construction Fin Co of 1208 Peshing Sq. Bldg. A permit was issued in the same year to the same owner for erection of a 6-room private garage on the same property. Total valuation of proposed work was $500. (LA Building Permit No. 2622-2633).

This building appears significant as both an excellent example of a property type that represents an important pattern of dense, urban development to accommodate...(continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): a rapid increase in population as well as for its distinctive use of the Spanish Colonial Revival style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

While many residential buildings were constructed in the Spanish Colonial Revival style during this time period, this property is a particularly excellent example of the style, serving as a paradigm of characteristic features of the style. What we now call Spanish Colonial Revival style is really the second phase of a larger, more encompassing style which began in the 1890s and 1900s. Developing alongside a national trend of high style, academic architects employing historic eclectic styles, Spanish Colonial Revival style, in the broadest sense of the term, was an attempt to create and define a prototypical Californian expression of architecture. The 1890s -1930s was a period in which historic eclecticism was the dominant mode of architectural expression. The academic, high style expression of Spanish Colonial Revival style was popularized by the Panama-California Exposition of 1915 in San Diego. The L-plan layout of the subject building provides more streetfront elevations to showcase stylistic elements, including the tower, balconies, and stairways with decorative elements, the archway over the driveway, and the courtyard and fountain.

B9b. Builder: S. Clark of 6001 Santa Monica Blvd

B10. Significance: Area: Los Angeles

Theme: Multifamily Development in Hollywood, 1911-1945

Context: Residential Development and Suburbanization, 1913-1945
Theme: The Architecture of Fantasy—Period Revival Styles, 1910-1940

Period of Significance: 1928
Property Type: Multi-family Residential
Applicable Criteria: A/1, C/3

According to the original building permit (LA Permit No. 36160), the Edgmont was built in 1927 as a 96-room, 40-family brick apartment building. While the original permit for erection of the building states that the owner was M. A. Frug of 3423 Glendale Boulevard, a 1929 Los Angeles Times article indicates that The Edgmont was owned by the Interstate Mortgage and Investment Company by 1929. The company also owned at least 7 similarly scaled and styled buildings throughout the Los Angeles area ("A Notable Achievement for 1928", LA Times, 2 Jan 1929, E21). The architect, A.B. Rosenthal is a significant California architect. He designed the Carthay Circle, California, and Hollywood...(continued on next page)

B13. Remarks:

B14. Evaluator: Jenna Snow

*Date of Evaluation: 09/18/2008
B10. Statement of Significance (continued): theaters in Los Angeles and the Granada Theater in Santa Barbara. The contractor was S. Clark of 6001 Santa Monica Blvd.

According to the 1930 Census, early Edgmont tenants included residents with a variety of occupations. In addition, in 1930, approximately eight Edgmont residents worked in the motion picture industry, including Ruth Adams, an actress, Ronald Barrows, an agent, Eddie Hoffman, a motion picture actor, Marice McDermot a motion picture writer, Frank H. Hicks, a stories writer, Ben Bodner, a motion picture cameraman, Henry Zuckerman, a motion picture clerk, and Doris Rich, a theatre actress.

This apartment building appears significant as both an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its fine architectural design in a Tudor Revival style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasible possible with configurations in the shape of an U, L, T or barbell.

Designed in an Tudor Revival style, the property exhibits character-defining features of the style, including a steeply pitched, hipped roof, tall, narrow windows grouped in trios, and modified turrets at either side of the facade. The style represents an exuberant period of expansion during the 1920s fueled by the explosive popularity of motion picture industry. Not only was the property inhabited by residents connected to the motion picture industry, the building itself provided entertainment for passers-by that invited their participation and reproduction of the city's self-image as a playful, fantastical paradise.

B10. Significance: Area: Los Angeles Theme: Annexation and Consolidation, 1895-1910

Context: Residential Development and Suburbanization, 1850-1912

Period of Significance: 1905

Property Type: Single Family Residential

Applicable Criteria: A/1

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

Context: Commercial Development in the Early 20th Century, 1913-1945  
Theme: Commercial Development and the Automobile, 1900-1945  

Period of Significance: 1929  
Property Type: Commercial  
Applicable Criteria: A/1  

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)  
De Mille Production Co. pulled a building permit for "offices and stores" in 1929 for a cost of $25,000. This property appears significant as a single store within a commercial row. The rise in private car ownership allowed people to live more easily in areas previously considered remote, and Hollywood became an important hub between Los Angeles and the burgeoning development in the San Fernando Valley. The area had been affluent since before the advent of the movie industry; now both wealth and a growing culture of celebrity combined to create a very high rate of private automobile ownership. This, increased mobility, in turn, shaped the built environment of Hollywood. It allowed...(continued on next page)

Los Angeles Department of Building and Safety, Permit No. 17665, July 6, 1929.  

B13. Remarks:  

B14. Evaluator: Tanya Sorrell  

Date of Evaluation: 01/29/2009
B10. Statement of Significance (continued): building activity to become more diffuse throughout the district in contrast to the tightly-clustered development of the previous decades centered on the streetcar lines.

Single stores in Hollywood conform to the compositional arrangements evidenced in typical commercial buildings such as the one-part commercial block, the two-part commercial block, and the two-part vertical block. In stores more than one story in height, the building façade is articulated in such a way as to convey use; retail was located on the ground level while office or living space was provided on the floors above. The relationship of retail space to the street is typically articulated with a broad expanse of inset display windows on the front façade oriented to pedestrians. It is this street façade that is the most articulated with other elements such as decorative building components, canopies, and signage.

**Theme:** Commercial Development in the Modern Era, 1946-1964; Automobile, Mobility and the Freeway System; LA Modernism, 1946-1964; Mid-Century Modern, 1946-1964

**Period of Significance:** 1956

**Property Type:** Motel

**Applicable Criteria:** A/1, C/3

(Describe importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1956, a permit was issued for construction of a $125,000, 31-unit, 2-story motel and apartment building for owner Anthony Collazo of 328 E. Broadway. The motel was originally built to contain 8 dwelling units, 22 guest rooms, and 17 parking spaces (LA Permit No. 52762). The motel-apartment was designed as two buildings and a carport forming a semi-enclosed courtyard with a pool contained within the court. In the same year, a permit was issued for construction of a semi-public swimming pool by owner Miller Slade Construction Co. of 8354 W. 3rd St. The pool contractor was Anthony Bros. of 5871 Firestone Blvd and the engineer was Mackintoch & Mackintoch. Total valuation of proposed...(continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): work was $4,200 (LA Building Permit No. 58347). The 1973 and 1987 LA City Directories call the building the "Hollywood Downtowner Motel". In the 1973 Directory, Karl Hecht is listed as the office contact.

This property appears significant as an important example of roadside commercial development directly related to the automobile and freeway system. Exhibiting the highest quality of design with its prominent and exuberant neon sign and rock wall along the primary facade, the building appeals to the passing motorist.

This property also appears significant as the work of important Los Angeles architect Jacob (Jack) Chernoff. A prolific architect, Jack Chernoff was influential in defining post World War II architecture. Architect Jack Chernoff designed many buildings throughout the Los Angeles area from the 1950s through the 1980s. His projects include the Tarzana Medical Center, a 16-story apartment building located at 10590 Wilshire Blvd in Westwood, a residential care facility in Chula Vista, the Skyline Terrace luxury townhouse community in Baldwin Hills, and a variety of single family homes and apartment buildings.

**Period of Significance:** 1960

The Hollywood Premiere Motel was completed in July of 1960. It was originally constructed as a 2-story motel containing 42 guest rooms, a coffee shop, and central courtyard with pool, built at a cost of $400,000 ("Photo Standalone 23 - No Title," Los Angeles Times, 10 Jul 1960, I9). In the same year, a permit was issued to owner L.B. Brown & Associates of 5333 Hollywod Blvd for construction of a semi-private swimming pool on the property. Total valuation of proposed work was $4,100. The contractor was Century Swim Pools of 948 No. Fairfax. The pool engineer was George Thomson. Drawings included with this permit show that the building was originally designed in a C-shape containing the... (continued on next page)

(This space reserved for official comments.)

In the same year, a permit was issued to owner "Hollywood Premiere Motel" to install an irregularly shaped neon roof sign. The contractor was Bay Neon of 2003 Sepulveda Blvd. and the engineer was Chas G. Grosh. Total valuation of proposed work was $2,000. (LA Building Permit No 54347). Motel architect Joyce Miller also designed a $650,000, 27-unit apartment structure built at 12404-16 Weddington St in North Hollywood for owner/builder Jacob Karasik.

This property appears significant as an important example of roadside commercial development directly related to the automobile and freeway system. Exhibiting the highest quality of design with its prominent and exuberant neon sign and central parking.

B10. Statement of Significance (continued): comprised of single family residences. The construction of courtyard housing allowed speculative landowners to develop their parcels at higher densities than that afforded by the construction of a single family home. Courtyard apartments, arranged around a central landscaped area, allowed tenants exterior space that provided additional privacy.

Architect Edith Mortensen Northman was Los Angeles’ only woman architect when she was working in the 1930s. She worked for Los Angeles architect Henry J. Knauer and later for Clarence J. Smale, under whom she served as chief draftsman. She was formally educated in architecture at the University of Southern California during the years 1927-1930. In addition to this property, she is responsible for the design of many other buildings throughout the Los Angeles area, including a synagogue located at 5500 South Hoover Street, a residence for film star Jean Hersholt located at 602 North Rodeo Drive, Beverly Hills, and a $100,000 studio apartment building located on Harper Ave between Sunset and Santa Monica boulevards for owner Elwood G. Houseman. Throughout the course of her career, she designed a wide variety of building types, including Union Oil Company service stations. During World War II, she designed buildings for the U.S. Army Corps of Engineers and after the War she specialized in design of large apartment buildings and hotels in Los Angeles and Palm Springs.

*Required Information
In 1928, permits were issued to owner Mrs. Jennie W. Burton for erection of a 2-story, 32-room, 8-family apartment house and 6-room garage located at 5436 Harold Way. The architect was Cramer & Wise and the contractor was Shave Construction Co. of Room 119 Commercial E. Building. The total valuation of proposed work for the apartment house was $28,500 and for the garage was $505 (LA Building Permit No. 3811-3812).

This bungalow court appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Designed in a Tudor Revival style, the... (continued on next page)

Period of Significance: 1928
Property Type: Multi-family Residential
Applicable Criteria: A/1
Context: Residential Development and Suburbanization, 1913-1945
Theme: Multifamily Development in Hollywood, 1911-1945

B12. References:
Los Angeles Department of Building and Safety, Permit No. 3811-2812, February 9, 1928.
B10. Statement of Significance (continued): property exemplifies character-defining features of a bungalow court including multiple, semi-dethatched buildings on a single residential lot arranged around a landscaped courtyard.

This parcel contains 3 buildings. Addresses included in this APN are: 5520, 5524, 5526 Harold Way. Sanborn Maps (corrected through 1951) show two dwellings extant on the lot in 1951. The larger dwelling, situated in the center of the lot and the smaller located on the western portion of the lot are shown (both are extant). The existing single-story building located on the eastern portion of the lot was not extant in 1951. New construction building permits associated with this APN were not found. A Certificate of Occupancy was issued to owner Kurt & Freida Bagner of the same address on May 25, 1951 for a 2 story, type V, 20 x 21 addition of storage room to garage apartment for...(continued on next page)

**B8. Related Features:**

None

**B9a. Architect:** Leonard James  **b. Builder:** E. Schmidt (owner)

**B10. Significance:**

**Area:** Los Angeles  **Theme:**

**Context:** Residential Development and Suburbanization, 1913-1945  **Theme:** Multifamily Development in Hollywood, 1911-1945

**Period of Significance:** 1939

**Property Type:** Multi-family Residential  **Applicable Criteria:** A/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1939, a permit was issued to owner E. Schmidt of 704 South Spring Street for erection of a 6-room building with 2 apartments and private garage at 5529-1/2 Harold Way. (LA Building Permit No. 25549-51).

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living...(continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Designed in a Colonial Revival style, the primary facade is designed to appear like a single family residence.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of... (continued on next page)

Update Status: Retains Integrity

The historic district to which it would contribute cannot be discerned
In 1958, a permit was issued to owner Al Gindling of 2960 Wilshire Blvd to erect a 2-story, 11-unit apartment house at 5618 Harold Way. Total valuation of proposed work was $70,000. The architect was R.L. Wilson and the engineer was D. Kendall.

This postwar multifamily apartment building appears significant for its highest quality of architectural design and epitomizes its property type. One of a mirrored pair with a landscaped driveway running between, the property is two stories in height and has a L-shaped plan. The stucco siding is augmented by grouped fenestration on the primary facade and a decoratively applied building name.

**Period of Significance:** 1923-  
**Property Type:** Church  
**Applicable Criteria:** A/1

Although there are 5 buildings currently extant on the lot, this property appears significant for Congregation Beth El, which was constructed in 1921. Hollywood’s population growth in the 1920s paralleled an influx of immigrant groups. Jewish immigrants, mostly from Eastern Europe and Russia, established Congregation Beth El in 1921 at 1508 Wilton Place, the first synagogue in Hollywood.

In 1930, a permit was issued to owner/contractor J. Clifford Smith of 5959 W. 3rd Street for construction of a 2-story, frame-and-stucco, 40-room, 19-family apartment building located at 5534 Fernwood Ave. Total valuation of proposed work was $23,500 (LA Building Permit No. 22628). Owner/contractor J. Clifford Smith also served as the general contractor for construction of a two-story Monterey-style home at 1029 Hanover Drive Beverly Hills for Mr. and Mrs. George P. Converse ("Contract let for Structure," Los Angeles Times, 19 Aug 1934, 16). Movie and TV actor Donald Randolph lived in the building in 1955 ("Money-Clues Solved for Third Week in Row," Los Angeles Times, 28 Aug 1955, ... (continued on next page)

(This space reserved for official comments.)
This apartment building appears significant as both an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its fine architectural design in a Art Deco style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

Designed in the relative rare Zigzag Moderne style, the property exhibits character-defining features of the style, including smooth stucco wall surfaces decorated with zigzags and other stylized geometric motifs, and pilasters emphasizing verticality. Though comparatively rare, and in vogue for not much more than a decade, this style was highly influential because it embodied the integration of four unlikely features unique to Los Angeles: changing patterns of land use; a popular response to early 20th Century progress and technology; the birth of new industries; and a sense of fantasy fueled by Hollywood and the movie industry that propelled the City's myths and legends.

Update
The 4-story, 90-room, 40-family apartment building was erected in 1929 for owner M. Gilson of 3315 Sunset Blvd at a cost of $75,000. The architect was Edith Northman. No contractor is listed on the original building permit (LA Building Permit No. 2484).

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its association with important local architect Edith Northman. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large.

(continued on next page)
B10. Statement of Significance (continued): cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

Architect Edith Mortensen Northman, Los Angeles’ only woman architect when she was working in the 1930s. She was formally educated in architecture at the University of Southern California during the years 1927-1930. She is described in the 1937 Los Angeles Times as Los Angeles’ only woman architect. She is responsible for the design of many buildings throughout the Los Angeles area, including a synagogue located at 5500 South Hoover Street, a residence for film star Jean Hersholt located at 602 North Rodeo Drive, Beverly Hills, and a $100,000 studio apartment building located on Harper Ave between Sunset and Santa Monica boulevards for owner Elwood G. Houseman. She also designed the Normandie Mar Apartment Hotel in the Tower District of Fresno, CA. Throughout the course of her career, she designed a wide variety of building types, including Union Oil Company service stations (she designed at least 50, including a Mediterranean style “super-service station” in Westwood Village in 1933), churches, commercial buildings, factories, residences, and apartments. During World War II, she designed buildings for the U.S. Army Corps of Engineers and after the War she specialized in design of large apartment buildings and hotels in Los Angeles and Palm Springs.

Context: Residential Development and Suburbanization, 1850-1912 Theme: Annexation and Consolidation, 1895-1910

Period of Significance: 1908 Property Type: Single Family Residence Applicable Criteria: A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

B10. Statement of Significance (continued): 1910. Designed in a Craftsman style, the property exhibits many character-defining features, including a low-pitched roof with wide eaves, exposed rafter tails, and venting under gable peaks, as well as wood clapboard siding and wood windows. Building permits were not available.

There is an additional non-contributing building on the property. In 1946, a permit was issued to owner Margaret Buxton Cavaniah of 1612 N. Harvard Blvd to erect a single-story studio workshop at 5438 Fernwood at a cost of $2,000. (LA Building Permit No. 7664).

DPR 523A (1/95) *Required Information
P3a. Description (continued): materials, workmanship, association, feeling **Setting (immediate)**: mature landscaping, driveway, fences

*Required Information*
In 1923, a permit was issued to owner Mabel D. Cameron of 1717 N. Bronson for erection of a 2-story 12-room, 4-family dwelling at 1725 - 1/4 - 3/4 N Bronson Ave. Total valuation of proposed work was $11,000. No architect or contractor are listed on the permit. (LA Building Permit No. 21859). The Sanborn Fire Insurance Map, updated to 1950, shows this building as 8 separate dwelling units located on the same parcel as the adjacent, single family property that was constructed in 1904. A few years prior to construction of this property, a group of shops and a brick garage were constructed along Hollywood Boulevard and orientation of the single family house located at 1717 North...(continued on next page)
B10. Statement of Significance (continued): Bronson was realigned to face Bronson. (Robert W. Nudelman, Director of Preservation Issues, Hollywood Heritage, letter to W. Uno Ujor, Community Redevelopment Agency of the City of Los Angeles, January 11, 2006.) Based on this construction history, it appears these modifications, including retail facing Hollywood Boulevard and subdivision of the lot to allow for construction of a multi-family residential building, permitted the older house to remain, despite apparent economic difficulties. Building permits were not available for conversion of this building from four to eight units.

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

DPR 523A (1/95)  

*Required Information*
In 1921, a permit was issued to owner N.S. Goodrich of 605 S. Western Ave for erection of a 2-story, 20-room, 4-family flat at 5911-5913 Carlton Way. Total valuation of proposed work was $18,000. The architect and contractor was Chas D. Wagner (LA Building Permit No. 35343).

This flat is significant as both an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as an important and unique example of Hollywood Regency style. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously...(continued on next page)
B10. Statement of Significance (continued): established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence.

Hollywood Regency style is particularly representative of Los Angeles. Though comparatively rare, and in vogue for not much more than a decade, these Hollywood Regency style was highly influential because it embodied the integration of four unlikely features unique to Los Angeles: changing patterns of land use, a popular response to early 20th Century progress and technology; the birth of new industries; and a sense of fantasy fueled by Hollywood and the movie industry that propelled the city’s myths and legends. Hollywood Regency style is associated with the city’s sustained prominence in automobile and early aerospace industry and culture; with the special horizontal quality of growth that characterizes Los Angeles as a 20th Century “suburban metropolis” city. This property exhibits character-defining features including a flat roof, symmetrical design, arched windows, and use of decorative Neoclassical ornament such as urns with swags over ground floor openings.

DPR 523A (1/95)  *Required Information
In 1934, permits were issued to owner Frank E. Long of 1676 N. Bronson for erection of a 2-story, 25-room, 6-family apartment building and a 6-family garage, located at 5915-19 Carlton Way. The architect was Arthur M. Hawes and the contractor was E. G. Hausman of 1222 S. Hayworth. Total valuation of proposed work was $11,500 for the apartment building and $380 for the garage (LA Building Permit No. 14711, 14712).

This building appears significant as both an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its distinctive use of the Spanish Colonial Revival style. ...(continued on next page)
B10. Statement of Significance (continued): Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

While many residential buildings were constructed in the Spanish Colonial Revival style during this time period, this property is a particularly excellent example of the style, serving as a paradigm of characteristic features of the style. What we now call Spanish Colonial Revival style is really the second phase of a larger, more encompassing style which began in the 1890s and 1900s. Developing alongside a national trend of high style, academic architects employing historic eclectic styles, Spanish Colonial Revival style, in the broadest sense of the term, was an attempt to create and define a prototypical Californian expression of architecture. The 1890s -1930s was a period in which historic eclecticism was the dominant mode of architectural expression. The academic, high style expression of Spanish Colonial Revival style was popularized by the Panama-California Exposition of 1915 in San Diego. The L-plan layout of the subject building provides more streetfront elevations to showcase stylistic elements, including the tower, balconies, and stairways with decorative elements, as well as the archway over the driveway.

Radio City Building

6087 W SUNSET BLVD

Stores and offices

Art Deco

1947

Los Angeles

Radio Broadcasting, Television Production, and Recording, 1946-1964

In 1946, a permit was issued to owner Bain Dayman of 1464 Vine Street for erection of a 4-story, "stores & offices" building located at 6085-6087 Sunset Blvd. No architect is listed on the building permits. The engineer is M. J. Gabrielsen and the contractor is Myer Bros. Total valuation of proposed work was $12,500 (LA Building Permit No. 7532, 8502). In 1956, approximately 1/3 of building tenants worked in the music industry. Other tenants worked in other areas of entertainment and in a wide variety of other industries (LA City Directory, 1956).

Although it was the film industry for which Hollywood first became renowned, the entertainment industries of radio, television and...(continued on next page)

B10. Statement of Significance (continued): broadcasting have played roles just as significant in the shaping of the district. By the time the movie industry began to leave the Hollywood district in the 1930s, it was the diversification to the production of other types of entertainment that allowed the area to remain the center of the entertainment industry. Moreover, the radio industry in Hollywood had a somewhat symbiotic relationship with the movie industry in that it relied on the large pool of movie-industry talent in the area for the success of its programming. In 1938, ninety percent of the personality programming on the air originated from Hollywood. Movie stars were as adaptable to the industry changes in Hollywood as the industries themselves, and their talents as actors lent themselves to the personality programming on radio that was increasingly popular nationally.

Likewise, when the recording industry came to Hollywood it was another logical extension of the radio industry. Music played a role in radio in the 1930s as stations often retained full orchestras to accompany their programming. In this early programming, music was often a peripheral component as it was intended as a background to the shows produced. However, between the 1930s and the 1940s, radio programming began to change to place a new emphasis on music itself. By 1942, seventy-five percent of airtime was devoted solely to music. Following this growing demand for music broadcasts, record companies, similar to the radio stations that had preceded them in their migration from New York to Hollywood, soon began to establish themselves in the area. This property is located almost adjacent to National Register-eligible Columbia Broadcasting System, Inc., which was constructed in 1937.

(Comment in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1958, a permit was issued to owners Mr. and Mrs. Archie Sarten of 6564 Hollywood Blvd to construct a new motel and apartments building with 5-car garage at 6055 Sunset Blvd. The building was originally designed as a 2-story building containing 28 guest rooms, 5 dwelling units and 16 parking spaces. The building was designed in a C-shape surrounding a surface parking lot. The total valuation of proposed work was $100,000. In the same year, a permit was issued for the addition of a double faced neon projection roof sign. The sign engineer was G.H. Willson and the contractor was Electrical Advertising of 2211 N. San Fernando Road, Burbank. Total valuation of proposed work was...(continued on next page)

**Period of Significance**:  
**Property Type**: Single Family Residence  
**Applicable Criteria**: 

(Define historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

It is unclear based on permits and other information whether the original permit cited below is for 1558 Gordon or the neighboring property to the North. Sanborn maps and Zimas parcel information indicate that 1562, 1564, and 1566 Gordon are all on the same parcel and that 1558 Gordon is its own parcel. However, permit research for the 1558 Gordon APN includes permits for 1558-1564 Gordon. In addition, the building permit states that the building located at 1562-1564 Gordon is a single-story single family dwelling. The building located at 1566 Gordon is a single-family dwelling while the building located at 1558 Gordon is a 2-story dwelling.

Although this record states the building...(continued on next page)

B10. Statement of Significance (continued): on this property is from 1903, the building fronting 1558 Gordon appears to have been built in 1946. Based on available building permit records and their attached drawings of the property, the pre-annexation 1903 building was extant at the rear of the property in 1946 (LA Permit No. 20381). The existing 1946 building was constructed in front of (fronting Gordon) the 1903 building. A building demolition permit was issued for the property in 1994 and current aerial photographs do not show the 1903 building to be extant on the property.

B10. Statement of Significance (continued): was issued to Morrison to move the existing single family residence to the rear of the lot to make room for the courtyard housing (LA Building Permit No. 47262).

This courtyard apartment appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. The construction of courtyard housing allowed speculative landowners to develop their parcels at higher densities than that afforded by the construction of a single family home. Courtyard apartments, arranged around a central landscaped area, allowed tenants exterior space that provided additional privacy.

DPR 523A (1/95)  *Required Information
In 1950, a Certificate of Occupancy and permit to relocate the 35-family, 105-room apartment building was issued to owners Herman O. and Frank F. Rasche of 2027 N. Hobart Blvd. The apartment building was moved about 200 feet within the lot possibly to make way for the adjacent Hollywood Freeway. The original permit for erection of the building was not located. According to the assessor, the building was constructed in 1924 and contains 34 units, has a total square footage of 20,700 sq ft. and the lot contains the following addresses: 5824,-5828 Carlton Way and 1601 N. Canyon Dr.

This apartment building appears significant as an excellent example of a property type that represents an... (continued on next page)
B10. Statement of Significance (continued): important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typical of this property type, this building is three stories tall, constructed of reinforced concrete and generally designed to fill as much of the lot as feasibly.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type from the pre-annexation period of Hollywood as well as an important example of Craftsman style. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. ...(continued on next page)

DPR 523B (1/95)
B10. Statement of Significance (continued): As a result of its growing pains, Hollywood became a district of Los Angeles in February of 1910.

Popular from the early 1900s through the 1920s, the Craftsman style utilizes design elements of the Arts and Crafts style and represented a conscious search for the supposed simplicity of pre-Industrial times. The bungalow's simplicity of form, informal character, direct response to site, and extensive use of natural materials, was a regional interpretation of the socio-economic and aesthetic reforms espoused by the Arts and Crafts Movement's founder, William Morris. Although modest in size, this property demonstrates most character-defining features, including most significantly, a low-pitched roof with wide eaves, exposed rafter tails, and venting under gable peaks. The property also displays character-defining features of wood shingle siding and a front porch that runs almost across the facade.

(This space reserved for official comments.)

This bungalow court appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Designed in a Mediterranean Revival style, the property exemplifies character-defining features of a bungalow court including multiple, semi-dethatched buildings on a single residential lot arranged around a landscaped courtyard.

DPR 523A (1/95) *Required Information
P3a. Description (continued): association, feeling
In 1931, a permit was issued to owner Frank Parritt of 9268 Willoughby Ave for construction of a single-story, 7-room, brick exterior wall, sound research and scoring building at 1455 Gordon St. Total valuation of proposed work was $12,000. The architect was Harold Walker (engineer) and the contractor was Wm. P. Neil Co., Ltd. of 4814 Loma Vista Ave. (LA Building Permit No. 6684). The Sanborn Fire Insurance Map updated to 1955 shows the property as part of Columbia Pictures Corporation campus, used as a projection room.

This property appears significant for its association with Sunset-Gower Studios, also known as Columbia Pictures Corporation. While the majority of the site was...(continued on next page)
B10. Statement of Significance (continued): previously surveyed as appearing eligible for listing in the National Register for its association with the major motion picture studios. Although now located on a separate lot, this property continues to be used as a support building for a motion picture studio. Columbia Pictures established itself at a location on Gower a block south of Sunset in 1924.

Most studios utilized an architectural expression based on the factory model. The studio system was well suited to the utilization of this building type. The production of movies entailed multiple processes, many of them technical. Therefore, as studio bosses sought to streamline production, the motion picture studio increasingly utilized the architecture of the factory with its emphasis on the production of films as a rational and machine-like process. The layout was heavily influenced by the early twentieth century idea of the factory in which production processes were broken down into discrete sets of units that employed different divisions of specialized labor. Designed as compounds, these complexes often presented a wall or continuous building mass to the street facing facades so that access to the studio facilities could be controlled. Large amounts of space were encompassed within these industrial complexes for functions such as daylight film stages, support buildings, exterior film sets, structures to house sets and props, darkrooms, screening and projection rooms, walk-in safes for storing films, costume and set design shops, and vast editing and processing rooms. The movie studio was designed to house as many of these processes as possible within a complex of utilitarian buildings that could accommodate multiple functions.

B10. Statement of Significance (continued): functioned as a recording studio. Among those who recorded at this location were Nat King Cole, Bing Crosby, Dean Martin, Sammy Davis, and Ricky Nelson.

Recording studios were designed as private, functional spaces to accommodate artists as they worked in recording sounds, whether for incorporation into films or as music for record production. With the new technological innovation of magnetic tape and its introduction into the recording industry in the 1950s, the spatial requirements for a recording studio became much more flexible than they had been previously. The technological development of magnetic tape for sound recording allowed records to be recorded almost anywhere. Because of the flexibility inherent in the recording process, many of the recording studios were located in buildings not originally built to accommodate them but previously used for some other commercial enterprise. Another factor that affected the flexibility with which recording studios could be located was that the physical production of records was separate from the production of the music placed upon them; while music was recorded in these buildings, it was not the location where records were physically made. Instead, the recording would be made on the premises and then sent elsewhere to press.

Despite the stature of some of personalities that recorded their significant work within the recording studio building type, many of these buildings are characteristically rather unremarkable architecturally. In fact, the consistently non-descript architectural expression of recording studios, as buildings not otherwise distinguishable from the common everyday landscape, suggests that the location of recording studios in small, architecturally unarticulated commercial buildings might have been an intentional strategy to create a working environment conducive to the musicians working there.

B10. Statement of Significance (continued): century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initially, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

Period of Significance: 1909 Property Type: Single Family Residence Applicable Criteria: A/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of... (continued on next page)

B10. Statement of Significance (continued): 1910. This property is designed in a Craftsman style, the most popular style of this period, and exhibits most character-defining features including a low pitched roof with exposed rafters and decorative venting under gable peaks, diamond paned windows, wide front porch, wood clapboard siding and wood double-hung windows. Building permits were not available for the property.

DPR 523A (1/95)  *Required Information
In 1926, a permit was issued to owner Minnie Stokes of 509 S. Western Ave for erection of a 2-story, 16-room, 16-family apartment building located at 1317 N. Bronson Ave. The architect was C.J. Smale and the contractor was N.F. Stokes of 509 S. Western Ave. Total valuation of proposed work was $22,000 (LA Building Permit No. 14957).

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in... (continued on next page)
B10. Statement of Significance (continued): large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell.

The Tudor Revival style of the building recalls imagery of a single family residence, a strategy employed to make apartment dwelling more socially acceptable.

Clarence J. Smale was born in California in 1886 and was in charge of the drafting rooms of the Preston Wright Co from approximately 1919-1923 and opened his own office at 509 South Western Avenue in 1923. In Hollywood, C.J. Smale designed the 2-story commercial building located at 1109 North Western Avenue (1928) and the 2-story apartment building located at 1317 N. Bronson Ave (1926). He designed countless other buildings throughout the Los Angeles, including a concentration of buildings in Hancock Park HPOZ. He designed the Monsignor O’Brien House (1925) and his Loyola Theater in Westchester (1948), both Los Angeles Historic-Cultural Monuments.

Period of Significance: 1925 Property Type: Apartment Applicable Criteria: A/1, C/3
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1925, a 99-year lease for the property located at 1825 N. Cahuenga Ave (Marcell Arms Apartments) was granted to Hollywood broker, Henri P. Guertin, and planned for improvement with a high-class structure in April of 1925 ("Syndicate Signs Long Lease for Cahuenga Lot," LA Times, 26 April 1925, F11). The building opened for occupancy in September of 1925. Henri P. Guertin represented all parties in real estate negotiations ("New Construction Indicates Building Trend," LA Times, 7 Jun 1925, G1). It is one of four similarly styled Beaux Arts buildings in Hollywood, erected by the Hollywood Income Properties, Inc, of which George Marcell was president in 1927. The other three properties...(continued on next page)

B10. Statement of Significance (continued): are the Shelton at 1735 Wilcox Ave (a 160-room apartment building completed in May of 1926), the Mayfair located at 1764 Wilcox Ave, and the Weston, or "Gilbert Hotel," a hotel located at 1550 N Wilcox. All four buildings were designed by architect William Allen and constructed by Arthur Bard & Co.

William Allen designed numerous other buildings throughout Los Angeles, including: Hollywood Sixty Club at the intersection of Hollywood Blvd and McCadden Place (not extant), an American Legion Post #123 building at Santa Monica, a fire department in Manhattan Beach, a hospital in Duarte, various single family residences, and South Gate City Hall. Arthur Bard constructed numerous buildings throughout Los Angeles, doing much of his work with architect William Allen and also completing projects based on the designs of prolific Los Angeles architect L.A. Smith. Bard constructed the Smith-designed Beaux Arts apartment building located at 1241 Vine St and the Smith-designed L.A. Concordia Athletic Club located at 360 Westlake Avenue. Bard is also responsible for constructing a two-story reinforced concrete theater located at the northwest corner of Crenshaw Blvd and Adams St.

This apartment building appears significant both as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its association with important local architect William Allen. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typical of the property type, this property is four stories tall, constructed of brick and designed to fill as much of the lot as feasibly possible with configurations in the shape of an U.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears to be a very significant an early example of Modern architecture. Modernism became the pre-eminent design solution from about 1932 to about 1984 for commercial buildings. While they were largely unsuccessful in convincing developers to adopt the modern style for residential buildings, Modern architects found commercial clients who were willing to adopt a modern style to distinguish their buildings. Modern architecture is characterized by a simplification of form and elimination of ornament. Most examples have flat roofs, deep roof overhangs, and a mix of masonry and glass exterior cladding.

Construction began on the building located at 1737-41 Ivar Avenue, opposite the Hollywood Knickerbocker Hotel, was built as a three-story, $600,000 "modern office structure" in 1953 by Hollywood Ivar Building, Inc. The building originally contained 300 square feet with a frontage on Ivar St of 165 feet and on-site parking. The design included two elevators and a third-story penthouse. Hollywood Ivar Building, Inc. principles were the Gore Brothers, Inc., Mrs. Ruth Gore, and Jules J. Covey. Gore Brothers was founded by the late Michael and A.L. Gore, pioneers in the motion picture industry in Hollywood and principal owners of the West Coast Theaters.

This property appears significant as...(continued on next page)

DPR 523B (1/95) *Required Information
Architect Earl Heitschmidt worked in partnership with Charles O. Matcham, architect in the 1940s and later worked as part of Heitschmidt & Thompson Architects (with Whiting S. Thompson) of 2010 Wilshire Boulevard. He was featured as an "Architect of note who planned Columbia Broadcasting Building on Sunset Blvd, along with many other outstanding structures," in a 1937 LA Times article featuring approximately 40 business and civic leaders of Los Angeles and Southern California. He was president of the Chamber of Commerce construction industries committee in the mid-1940s and was elected into fellowship of the American Institute of Architects in 1949, becoming president of the State Board of Architectural Examiners in April of 1952. He was honored by the Los Angeles Chamber of Commerce with an achievement award for outstanding public service at the 16th annual gridiron banquet in March of 1951.

Heitschmidt was the associate architect for design of Park LaBrea, the multi-million dollar, multiple-housing Colonial Revival development on Fairfax Avenue, between Third and Sixth Streets in 1941 ("Fairfax Ave. Town Rising," LA Times, 14 Sep 1941, E1). He is also responsible for the following designs: The Columbia Broadcasting building on Sunset Blvd and Gower St (1937); An $85,000 store building at 6101 Sunset Blvd (1937); Pacific Mutual Downtown Heliport constructed on the 12-story Pacific Mutual Life Building at 6th Street and Grand Avenue (1950); Park LaBrea; the Lou Costell Jr. Youth Foundation play center and medical clinic project, located at the northwest corner of E. Olympic Blvd and Grande Vista Ave (1945); A 2-story office building located at 140 S Beverly Drive in Beverly Hills (designed with Charles O. Matcham, 1950); A $3,600,000 addition to the Biltmore Hotel (as part of the firm Schulze & Weaver in 1927); A fire and police station in Palm Springs (1935); A 3-story, reinforced concrete building constructed on the east side of the thoroughfare between 11th and 12th streets (in association with Abbot. Merkt & Co, 1936); Columbia Steel Company's $150,000 office building adjoining the company's warehouse at 2nd St and Slauson Ave (1937).

Heitschmidt is also the designer of the $325,000 Library-Administration structure at the College of Medical Evangelists (CME), owned by the Seventh Day Adventist Church, Loma Linda campus. Heitschmidt also designed a $1,000,000 dental clinic and training center for the CME, slated in 1953 to be constructed at either the CME Loma Linda campus or another location. The original design of the dental clinic and training center was created to harmonize with the Library-Administration building ("$1,000,000 Dental Clinic Being Planned," LA Times, 6 Sep 1953, 25).

According to a 1949 LA Times article, Heitschmidt "designed many housing projects for Federal housing authorities and for the U.S. Navy throughout Southern California," ("Local Architect Wins Honor," LA Times, 27 March 1949, E2). Heitschmidt was chosen by the City Housing Authority to prepare plans for a low-rent housing project in the Sawtelle district in 1939. Chosen in the same selection process were architects Richard Neutra, Welton Beckett, Gordon B. Kaufmann, Paul R. Williams, Adrian Wilson, Walter Wurdeman, and more ("Housing Project Architects Picked," LA Times, 26 Jul 1939, A3).

According to the Los Angeles City Directory, tenants of the building in 1956 included: attorneys, accountants and CPAs, and offices for various companies, including: Thatcher Glass Manufacturing Company, Powers-Stanley Agency, Flamingo Films, Harris Group, Wolper Dave Flamingo Films, insurance consultants, advertising agencies, Texas Instruments Inc., Sims Herman Co real estate, Proctor & Gamble Productions, General Electric Credit Corporation, and Goodin & Company. Tenants in 1965 were also professional in nature, including attorneys, accountants and talent agencies. By 1973, tenants were more heavily oriented toward the entertainment industry than in 1956 and 1965, with about half of tenants being talent agencies, production companies, film companies, casting companies, etc.

Period of Significance: 1917 Property Type: Multi-family Property Applicable Criteria: A/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

A total of five two-story buildings are extant on the lot located at 1728 Wilcox Avenue. In 1917, permits were issued for construction of five 12-room, 2-family residential buildings located at 1722, 1724, 1726, 1728, and 1730 Wilcox Avenue to owner Eloise A. Williams of Route Box 3, Santa Monica. The architect listed on the permit is crossed out. The contractor listed on the permit is M.S. Williams of 1726 Wilcox Ave (LA Building Permit No. 3175-3187).

Interestingly, the adjacent property to the north was also developed as a bungalow court by the same owner and contractor in 1916. Permits were issued for construction of four 12-room, 2-family residences (1732, 1734, 1738, and...(continued on next page)

DPR 523B (1/95)
B10. Statement of Significance (continued): 1740 Wilcox Ave and one 16-room 4-family residence (located at 1736 Wilcox Ave). This bungalow court is no longer extant (LA Building Permit No 1977-81; Sanborn Fire Insurance Maps, corrected through 1951).

This bungalow court appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Designed in a Mediterranean Revival style, the property exemplifies character-defining features of a bungalow court including multiple, semi-dethatched buildings on a single residential lot arranged around a landscaped courtyard.

Context: Entertainment Industry, 1946-1964

Period of Significance: 1961-1980 Property Type: Office Applicable Criteria: A/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1925, a permit was issued to owner E.T. Heyden of 1096 N. Western Ave for erection of a 2-story, 6-room stores and offices building located at 6361-6369 Selma Ave. The architect/contractor was H.D. Frankfurt of 1096 N. Western Ave. Total valuation of proposed work was $11,000. In 1929, the building housed an automobile parts store.

This property appears significant for its association with Moonglow Records and Recording. Moonglow Records was started by Ray Maxwell, originally from Belgium. The first single in 1961 was Penny Richards' "I'll Be Yours"/"The Only Way." Moonglow Records was best known for releasing albums by the Righteous Brothers, before they were signed by Phil...(continued on next page)

Recording studios were designed as private, functional spaces to accommodate artists as they worked in recording sounds, whether for incorporation into films or as music for record production. With the new technological innovation of magnetic tape and its introduction into the recording industry in the 1950s, the spatial requirements for a recording studio became much more flexible than they had been previously. The technological development of magnetic tape for sound recording allowed records to be recorded almost anywhere. Because of the flexibility inherent in the recording process, many of the recording studios were located in buildings not originally built to accommodate them but previously used for some other commercial enterprise. Another factor that affected the flexibility with which recording studios could be located was that the physical production of records was separate from the production of the music placed upon them; while music was recorded in these buildings, it was not the location where records were physically made. Instead, the recording would be made on the premises and then sent elsewhere to press.

Despite the stature of some of personalities that recorded their significant work within the recording studio building type, many of these buildings are characteristically rather unremarkable architecturally. In fact, the consistently non-descript architectural expression of recording studios, as buildings not otherwise distinguishable from the common everyday landscape, suggests that the location of recording studios in small, architecturally unarticulated commercial buildings might have been an intentional strategy to create a working environment conducive to the musicians working there.

Designed by Edward Cray Taylor and Ellis Wing Taylor, the Los Angeles Gas and Electric Corporation building at 1641 Ivar Street opened in February of 1937 and was built at a cost of $100,000. Built to act as the Hollywood district office, it was the sixth such structure for the company, which had 12 branch offices in use. It was built to service approximately $50,000 customers and to house about seventy employees. Architects Edward Cray Taylor (1887-1946) and Ellis Wing Taylor were brothers, associated in a partnership sometimes referred to as Taylor & Taylor. Taylor & Taylor other work included designing the original buildings of Santa Monica's Aircraft Factory and also planned later...(continued on next page)

This property appears eligible for listing in the California Register for its association with the recording industry. With the expansion of the record industry across the nation after World War II, Hollywood increasingly became a center for music production. By the mid-1950s and into the 1960s, record companies began to erect large corporate towers in Hollywood. These record company headquarter buildings often utilized a modern style similar to that employed across the nation during this period for corporate headquarter buildings of companies marketing everything from tractors to life insurance.

The Radio Corporation of America (RCA) West Coast Headquarters Building, erected in... (continued on next page)

B13. Remarks:

*B14. Evaluator: Jenna Snow

*Date of Evaluation: 01/21/2009

(This space reserved for official comments.)
B10. Statement of Significance (continued): 1963 at 6363 Sunset, was designed to have a “floating tower effect” with a six-story tower clad in precast concrete panels set upon a wide one story pedestal or “plinth.” In this case, only half of the 82,000 square foot building was actually allocated for the company’s own use; the rest of the building was leased out to tenants. This allowed the company to have a large, signature building that would publically convey an image of success while it also created some financial security for maintaining the building through the extra revenues generated by leasing half of the space within it to others.

Record headquarters buildings were much larger than the small scale recording studios that abounded in Hollywood due to their nature as a corporation; in an effort to control and to capitalize upon every aspect of the music production process, they combined the multiple functions associated with producing and distributing a record under a single roof. The headquarters building constructed for RCA in 1963 housed not only two large two-story recording studios, a smaller studio, two recording rooms, three control rooms, two editing rooms, two cutting rooms, a listening room and a master test room but also corporate offices, an electronic data processing division, a sales personnel division, and an area for equipment.

*Required Information*
As the only commercial property still extant from Hollywood’s pre-annexation period, this property appears eligible for listing in the California Register, despite some losses of integrity. Constructed as a garage in 1909, one year after the Model T rolled off the assembly line, the property was used by the Hollywood & Los Angeles Daily Express Co (Inc.) in 1915, a transfer and trucking company, and by the Yellow Cab Company in 1924. 1907 Sanborn maps show a few garages, often in conjunction with livery stables. As early automobiles were not all-weather vehicles, they needed to be housed in covered spaces, which people typically were unable to provide at their residence. While they were...(continued on next page)
B10. Statement of Significance (continued): often adapted from liverys, the garage at 6422 Selma Avenue appears to have been constructed for this purpose. Construction history was not available.

Theme: Late Modern and Post Modern, 1965-1980

Period of Significance: 1966

Property Type: Bank

Applicable Criteria: A/1

A permit was issued for construction of the Bank of America building located at 6300 Sunset Blvd in September of 1965 for owner Pick and Callaha of 1313 N. Vine St. The building was designed by Welton Beckett & Associates and constructed as a 2-story structure containing offices, a bank, and a parking garage for Bank of America. Total valuation of construction was $1,170,000. The engineer was Stacy & Meadville and the contractor was J.A. McNeil Co.

This property appears significant as a fine example of Late Modern architecture as well as for its association with architect Welton Beckett. The building combines aspects of Brutalism and International Style architecture. The...(continued on next page)

B10. Statement of Significance (continued): International Style, characterized by an absence of ornament, uniform wall surfaces, cantilevering, horizontality, and bands of windows, minimizes mass and weight for the sake of the effect of pure volume. Whereas the International Style placed a premium on horizontality and expressing volume, Brutalism is characterized by weight and massiveness with an emphasis on expressing structure and raw materials. In Brutalist architecture, the structure, often with exposed concrete frame, is frankly exhibited, broad, quiet wall surfaces are interrupted by deep-shadowed penetrations of the building mass, vertical slots may contrast with broad oblong openings or tall openings with horizontal slots, and ‘egg-crate’ effects are also much employed.” The style was popularized by English architects, Peter and Allison Smithson, whose Hunstanton School (1954, Norfolk, England) was the first building identified as Brutalist. Brutalism, as both an ethic and aesthetic, is heavily influenced by the concrete-work of Le Corbusier’s ‘Unite d’Habitation’ (1948-1954, Marseilles, France). This building evinces an agglomeration of elements from both the International Style and Brutalism in its architectural expression. The horizontal glazing at the facade and column supports of a flat, expressive roofline are typical elements of the International Style. The geometric massing, overall sense of weight and massiveness, and rubble concrete are expressive of Brutalism.

Welton Becket (1902-1969) was an important and prolific Los Angeles architect whose firm, Welton Becket & Associates was responsible for the design of many iconic buildings from the 1930s-1960. Initially in partnership with Walter Wurdeman, his firm was responsible for the design of Capitol Tower (1956), Cinerama Dome (1963), Pan-Pacific Auditorium (1935), Los Angeles Music Center (1964-1967), as well as the master plan and many buildings on University of California Los Angeles campus (1948-1965).

Period of Significance: 1930-1955

Property Type: Office

Applicable Criteria: A/1

The building located at the northeast corner of Vine St and Afton Ave was owned by John J. Davidian and housed the Radio Center Market prior to 1955, when it was remodeled into a modern TV, commercial and theatrical film studio for Jerry Fairbanks Productions. The remodel cost was approximated at $500,000. A. Godfrey Bailey was the architect and Howel G. Hawkins was the contractor. In addition to opening new offices at the Vine and Afton location, Fairbanks retained his existing quarters at 6052 Sunset Blvd, where he had been housed for twenty years.

This property appears California Register-eligible as an example of the earliest extant grocery constructed during the Depression. It...(continued on next page)

Period of Significance: 1930 Property Type: Commercial Applicable Criteria: A/1, C/3

The earliest permit available for this property is a building alteration/repair permit, issued in 1931 for addition of 2-roller awnings to the building. The permit states that the building was, in 1931, being used as a store and that it would continue to be used as a store after the alterations were complete. The owner at the time was Jean Swartz, Ltd. of 1770 N. Vine St. No architect is listed on the permit. The contractor for the awning work was A. Hoegee & Sons, Inc. of 745 Merchant Street. Sanborn Maps (corrected through 1951) corroborate that the building located at the southeast corner of Vine and Yucca Streets was used as a store.

In 1920, the Diamond Louisiana Oil Company... (continued on next page)

DPR 523B (1/95)
B10. Statement of Significance (continued): had an office at 1770 Vine St. In 1936, tenants of 1770 N Vine St included the Master Life Insurance Company (MD and GH King) and tenants of 6272 Yucca St included: Jas M. Fidler (radio columnist), Henry L Gogerty (architect), and an office for the Country Church of Hollywood. In 1955 Brown Motel Investment, Inc., of which David A. Brown was president, had an office at 1770 N. Vine.

This property appears significant both for its architecture as well as a fine example of commercial architecture constructed during the Depression. Moderne architecture is associated with the City’s sustained prominence in automobile and early aerospace industry and culture; with the special horizontal quality of growth that characterizes Los Angeles as a 20th Century “suburban metropolis” city. This property exhibits character-defining features including a strong sense of horizontality, a curved, semi-circular volume at the corner, windows “punched” into walls, and relatively unadorned, unornamented surfaces.

Commercial buildings during this period were carefully designed to maximize visibility to both pedestrians and vehicles through their design and location. The sites for commercial buildings and chain stores, in particular, were carefully studied in advance of construction. The most desirable sites for the location of commercial buildings were those within the city core and with proximate to mass transit points or other generators of pedestrian traffic. The strong dependence upon a large volume of customers for the rapid turnover of goods was expressed architecturally through large expanses of glass in ground level storefronts. Large storefronts with inset entries were intended to lure the passing pedestrian as well as the faster-moving motorist with an instantly-visible and attractive display of goods. The space inside such commercial stores was often flexible to accommodate a variety of tenants, and much attention was often devoted to a layout conducive to efficient movement of goods and customers to maximize sales and profits.

In 1949, a building permit was issued to owner Episcopal Church of St. Stephen of 6129 Carlos Ave, for construction of the 2-story parish hall located on the westernmost portion of the parcel. According to drawings attached to the permit, the main church building fronting Yucca Street was already in existence when the permit was issued for construction of the parish hall. The architect is listed as Carleton M. Winslow Jr. No engineer or contractor are listed on the permit. A single-family residence and a church building were already present on the lot in 1949. The parish hall was constructed at a cost of $35,000 (LA Building Permit no. 28219).

(Assess importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

A permit to erect a four-story, ninety-toom apartment at 6720 Franklin Place at a cost of $80,000 was granted to H.L. Farr in 1928. The apartment building located at 6720 Franklin Place is identified as the La Habra Apartments in the 1936 LA City Directory.

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective...

B10. Statement of Significance (continued): dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typically four or five stories tall, they were usually constructed of brick or of reinforced concrete and were generally designed to fill as much of the lot as feasibly possible with configurations in the shape of an U, L, T or barbell. This building, five stories tall, was designed in a modest Beaux Arts style and exhibits character-defining features of the style including a composition in a base-shaft-capitol arrangement, a base that appears to be rusticated stone, and terra-cotta medallions. Construction history was not available.

This courtyard apartment appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. The construction of courtyard housing allows speculative landowners to develop their parcels at higher densities than that afforded by the construction of a single family home. Courtyard apartments, arranged around a central landscaped area, allowed tenants exterior space that provided additional privacy.

Period of Significance: 1922

Property Type: Multi-family Residential

Applicable Criteria: A/1

Permits were issued for construction of 4 5-room, single-family residences located on this property in 1922. Each building was originally designed as either a 1 or 1 1/2-story building constructed at a cost of $3,000 for owner Lionel M. Waugh of the same address (specifically, 1768 N Las Palmas Ave). Lionel Waugh was a pharmacist and owned the first drugstore in Hollywood, located just south of his Las Palmas residence at 6676 Las Palmas Ave (at Hollywood Blvd).

This bungalow court appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in...(continued on next page)

(continued on next page)
B10. Statement of Significance (continued): Directory refers to the building located at 1801 Grace Ave as the "Hawaiian Hotel of Hollywood." 6 tenants are listed in 1956. Sam Feldman is also associated with development of the 28-unit apartment building located at the southwest corner of Sunset and Laurel Blvds. In the 1970s, the apartment building served as a rock star hangout.

This building appears significant as an excellent example of a Postwar Apartment House. It was constructed in response to the same development pressures. Development pressure to more intensively develop the land caused the area to become largely built out with small, single-family houses and large multi-family housing during the 1920s. Throughout the 1930s, residential development in the survey area occurred at a much slower pace as it was limited to infill on scattered sites that had not yet been developed. However, in the decade and a half following World War II, the pace of residential development in Hollywood once again accelerated. The increase in development in the post-war years reflected both a generalized building boom that was occurring nationwide in the post-war years but also a more intensely localized building boom unique to the Los Angeles region. As growth of single-family residential areas moved further out from the city center, dense multi-family development occurred as infill in areas of the city that had previously been considered suburban in character. The building exhibits character defining features of a postwar apartment building, including a modern style aesthetic and a stucco finish with stone panels, and a donut shape with an interior pool.

Permits were issued in 1961 for demolition of 7 dwellings and 1 garage to make way for a 13-story, 122-foot tall apartment and garage building, located at 1850 N. Whitley Ave. Total valuation of construction of the new building was $5,500,000. The architect is Robert C. Lessen. The engineer is Barnhard Cardan. The contractor is M.J. Brock and Sons of 2894 Rowena.

A 1961 Los Angeles Times article notes that the building was originally known as the Hollywood Ardmore, built as a co-operative apartment development with 202 units and basement garages for parking. In this cooperative arrangement, the dwelling units were essentially sold as condominiums. The Ardmore Development Company...

B10. Statement of Significance (continued): offered the benefits of home-ownership without the hassle of maintenance. Services, such as a maid, valet, 24-hour switchboard, catering, bar and snack services, parking attendant and more were offered to residents, called "shareholder-residents." Upon completion in 1962, the Hollywood Ardmore was valued at $6.4 million. A coffee shop, barber shop, and beauty salon were planned to be opened on the main floor and mezzanine area.

The lobby of the building was originally designed with a combination of ceramic tile and stone. Two free-standing walls added as design elements at both sides of the front of the building were done in ceramic glaze in green and black. Apartments were designed with individual balconies with dividers that form planter boxes. Colorful glass mosaic decorated planters are evident on balconies and along the primary facade at street level. Glass mosaic tile was also used to elaborate the building entrance. Quarry tile was used to finish the floor area of all patios and the pool deck.

Robert Charles Lesser & Associates designed several other "Ardmore Cooperatives" throughout Los Angeles, including the $9.4 million, 208-unit Wilshire Ardmore Cooperative Apartments, located at 1129 Westwood Blvd in Westwood and prepared plans for buildings located at: 1903 Fremont in South Pasadena, 3132 South Sepulveda Blvd in West Los Angeles, and 6342 Coldwater Canyon Ave in North Hollywood.

Robert C. Lesser, AIA, is an architect by training and started the Robert Charles Lesser & Co. realty and market research firm, a real estate consulting and market analysis firm, headquartered at 8383 Wilshire Blvd in Beverly Hills. Prior to October of 1972, the headquarters was located at 1180 S. Beverly Drive.

This property appears to be an especially fine example of Mid-Century Modern architecture. What is now known as Mid-Century Modern architecture was a continuation of Modern movements that came earlier and much is an amalgamation of architectural expressions from an earlier period, including the International and Bauhaus styles. The most notable architects combined new architectural solutions to integrate traditional precedents into a style that moved the entire field of architecture, and sometimes public consciousness, in a new direction. This building exhibits many character-defining features, including a simplification of form and elimination of ornament, with ornament limited to mosaic tile along balcony planters. Other character-defining features include a flat roof and construction materials of masonry and glass.

(A Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)  

A building permit was issued in June of 1923 for construction of a 2-story, 13-room, office and stores building located at 1606-1608 Highland for owner Mrs. Alice Harrod of 6833 De Longpre. The architect and contractor were both Arthur Kelly of 1201 Van Nuys Blvd. Total valuation of proposed work was $26,000. One other building, a single family home, was present on the lot at the time of construction. The lot now contains only the office and stores building with a surface parking lot to the rear.  

This property appears significant for its association with the entertainment industry as well as for its association with important local architect Arthur Kelly. From 1925-1926, the... (continued on next page)

B10. Statement of Significance (continued): building housed the Screen Library Service, Inc, a revolutionary organization created to cast potential motion picture artists by films rather than by photos. The organization was originally headed by Brooks B. Harding. It was housed at this location for approximately one year, after which it was moved into the Taft Realty Building, located at Taft Ave and Hollywood Blvd. After that time, the building housed the first offices of the Hollywood Reporter.

Prolific Southern California architect Arthur Kelly designed numerous buildings throughout the Los Angeles area, including the 1928 Spanish Colonial Revival "El Adobe Market, located at the corner of Hollywood Blvd and Kingsley Drive (extant). He designed many large single-family residences throughout the Los Angeles area, including a Spanish Colonial Revival residence for E.C. Gates in West Hollywood, an English Cottage for George S. Rees in Beverly Hills, a 30-room Gothic mansion in Holmby Hills for Arthur Letts Jr. (son of the founder of the Broadway department store), a Colonial mansion for R.W. Kirkley in Hacienda Park, a residence for M.S. Waite on Los Feliz Blvd, and a 10-room residence for Ben Thorpe in Covina. Arthur Kelly showed photographs and renderings of 6 of his residential projects in the "Pillars of Fine Architecture" exhibition of residential architecture of Southern California in September of 1930. Approximately 20 other architects had work featured in the exhibit, including noted architects, Myron Hunt, Gordon B. Kaufmann, and Wallace Neff ("Permanent Exhibition Announced," LA Times, 21 Sep 1930, D4). Kelly's architectural practice was located at 1201 Van Nuys Building prior to December of 1923 and was moved to 2512 West Seventh Street after December of 1923 ("Display Ad 279," LA Times, 2 Dec 1923, V6). Arthur Kelly also designed 1 of 6 houses included in the 1935 "House and Garden Exhibition," a showcase of 6 homes, each designed in a different architectural style, located on the 5900 block of Wilshire Blvd, between Genesee and Spaulding Avenues. The other 5 architects who designed homes included in the exhibition were: Richard Neutra, Joe Estep, Henry Carlton, Newton and Robert Dennis Murray, Winchton L. Risley, and Paul R Williams ("Construction to be Shown," LA Times, 15 Sep 1935, 17). This development is no longer extant.

B10. Significance: Area: Los Angeles

Context: Architecture, Engineering and Designed Landscapes, 1850-1912

Theme: Arts and Crafts Movement, 1895-1918; Residential Development and Suburbanization, 1913-1945

Property Type: Multi-family Residential

Applicable Criteria: A/1, C/3

Period of Significance: 1912

This duplex is significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as an important example of the Craftsman style. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary facade appear more like a single family residence. Designed in a...(continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): Craftsman style, the primary façade is broken down by placing entry porches on opposites sides of the elevation so that individual units recall the imagery of an individual single-family residence.

Popular from the early 1900s through the 1920s, the Craftsman style utilizes design elements of the Arts and Crafts style and represented a conscious search for the supposed simplicity of pre-Industrial times. The bungalow's simplicity of form, informal character, direct response to site, and extensive use of natural materials, was a regional interpretation of the socio-economic and aesthetic reforms espoused by the Arts and Crafts Movement's founder, William Morris. Although modest in size, this property demonstrates a relatively rare example in Hollywood of a two story variation. The property exhibits character-defining features, including wood shingle siding and a low-pitched roof with wide, exposed rafter tails, and venting under gable peaks. Building permits were not available for this property.

This building appears significant as both an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its distinctive use of the Spanish Colonial Revival style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not... (continued on next page)
B10. Statement of Significance (continued): immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

While many residential buildings were constructed in the Spanish Colonial Revival style during this time period, this property is a particularly excellent example of the style, serving as a paradigm of characteristic features of the style. What we now call Spanish Colonial Revival style is really the second phase of a larger, more encompassing style which began in the 1890s and 1900s. Developing alongside a national trend of high style, academic architects employing historic eclectic styles, Spanish Colonial Revival style, in the broadest sense of the term, was an attempt to create and define a prototypical Californian expression of architecture. The 1890s-1930s was a period in which historic eclecticism was the dominant mode of architectural expression. The academic, high style expression of Spanish Colonial Revival style was popularized by the Panama-California Exposition of 1915 in San Diego. The L-plan layout of the subject building provides more streetfront elevations to showcase stylistic elements, including the tower elements, balconies, and arched entryways.

Period of Significance: 1926  Property Type: Multi-family Resident  Applicable Criteria: A/1, C/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Construction on the 5-story apartment building located at 1519 McCadden Place began in April of 1926. The building was constructed for owner Daisy Bergeron and the total valuation of the construction was over $200,000. It was originally designed as a T-shape structure with 29 single and 2 double apartments and four hotel rooms, making a total of 137 rooms.

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its association with important local architect Richard D. King. Despite the pervasive American ideal of single family...(continued on next page)

DPR 523B (1/95) *Required Information
B10. Statement of Significance (continued): ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typical of this property type, this building is five stories tall, constructed of brick or of reinforced concrete and designed to fill as much of the lot as feasibly possible with configurations in the shape of a T. The building is designed with elements of the Gothic Revival style, such as corner elements at corners made to appear as towers.

Born in Tennessee, Richard King (1879-1945) worked primarily in Southern California. He is best known for his design of the Riviera Apartment House in Long Beach, which was constructed in 1929 in the Chateausque style. The cooperative apartment building was the tallest commercial building in the greater Los Angeles area from the time of its construction until the late 1950s. Richard King is also known for his design of Vernon City Hall, as well as a children’s home in Hermosa Beach for the Children’s Hospital of Los Angeles. In Hollywood, Richard King was responsible for the design of the Hollywood Professional Building at 7046 Hollywood Boulevard in 1922, also designed in a Gothic Revival style.

The building located at 1441 McCadden Place was originally designed as a Knights of Columbus clubhouse. A permit was issued to owner Hollywood Columbus Club, Inc. of 1646 Las Palmas Ave for erection of the 13 room "club building" located at 1441 N. McCadden Place. An architect and contractor are listed on the original building permit but the text is unreadable. Total valuation of proposed construction was $30,000. It was formally opened in August of 1927. George P. Caldwell was Grand Knight of the unit at the time. It remained the Knights of Columbus clubhouse through at least 1951.

This property appears significant for its association with the social club Knights of Columbus. ...(continued on next page)
B10. Statement of Significance (continued): The pervasive influence within American cultural life of traditional institutions, such as churches and fraternal organizations, began to decline after 1910, while other social organizations emerged to play a more prominent role in people’s lives. This shift was one in which people increasingly sought out social groupings that they believed embodied the values they, themselves held. Accompanying the rise of social groupings such as business groups, professional groups, and labor unions was that of social clubs and public service organizations. In the 1920s, membership in social clubs grew parallel with the growth in population and perceived social ills.

The Knights of Columbus is the world's largest Catholic fraternal service organization. It was founded in the United States in 1882 as a charitable organization. Many early members were recent immigrants who often lived in unsanitary conditions and performed hazardous jobs for poor pay. Since its founding, a primary mission of the Knights of Columbus has been to protect families against the financial ruin caused by the death of the breadwinner.

Beginning in 1965, the building was used by TTG Recording (for Two Terrible Guys), which was founded in 1965 by Ami Hadini and Tom Hidley. Due to its high decibel level threshold, the studio became popular with rock musicians of that time, including The Monkees, Eric Burdon, Alice Cooper, Jimi Hendrix, and Frank Zappa.

P3a. Description (continued): integrity: medium, setting, location, materials, workmanship, association, design, feeling
Formally opened in March of 1929, the Aloha Apt - Hotel was built at a cost of $300,000. It was proposed for construction in 1928. Plans were prepared by Hillier & Sheet, architects and engineers for William Berkowitz and Associates. The brick construction, Mediterranean style building was designed to be 4-stories plus basement, covering an area of 100x142 feet, and containing a "spacious" lobby and 72 apartment units. It was purchased by W.J. Wallace from the Angeles Holding Company for $325,000 in May of 1929, shortly after its opening. In July of 1929, the Aloha Apt-Hotel was announced to be one of 100 properties in a hotel and apartment chain owned by Consolidated Hotels, Inc. ...(continued on next page)
B10. Statement of Significance (continued): Early residents of the Aloha Apt - Hotel included: Ethel Grey Terry, noted American theater and motion picture performer. She died at the Aloha in January of 1931. She was married for twenty years to actor Carl Gerard.

This apartment building appears significant both as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its association with architects Hillier and Sheet. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typical of this property type, this building four stories tall with a penthouse, constructed of reinforced concrete, and designed to fill as much of the lot as feasibly possible with a configuration in the shape of an U.

Architects & engineers Hillier & Sheet are responsible for the design of many Los Angeles area buildings, including: 837 S. St. Andrews Place, a Mediterranean style, 4-story, $100,000 apartment-house, built with Guaranty Construction & Investment Co.; 1716 El Cerrito Place, a Mediterranean style, 7-story, 49-unit, $200,000 apartment house for William C. Pratt; a $520,000 chateau style apartment building located at Fountain and Sweetzer Avenues in West Hollywood for the Chateau Dijon Holding Company (does not appear to be extant); a 2-story, 10-room Spanish style single family residence built for Simeon Alier at 2243 Cheswick Lane, Los Feliz Hills, constructed at a cost of $25,000; a Mediterranean style 6-story apartment building located at 4649 for A.L. Gindling; a "California design" hotel, 5-stories plus basement with eighty rooms, located on Park Boulevard in San Diego for Brooks Brothers of South Alvarado Street. Architect E. Allen Sheet of the firm Hillier & Sheet is credited with designing the California Mission Springs Sanitarium, a $1,000,000 hotel and sanitarium project for Riverside, CA, including plans for erection of 16 large buildings and 30 bungalows.

B10. Significance:
Area: Los Angeles
Theme: Residential Development and Suburbanization, 1850-1912
Context: Annexation and Consolidation, 1895-1910

Period of Significance: 1901-1910
Property Type: Motel
Applicable Criteria: A/1

This property appears significant as the oldest extant building in Hollywood. The 1913 Sanborn Map shows the existing residential building in its current location. In 1913 the entire block was residential, containing four similarly scaled dwellings each set back the same distance from the street. The Hollywood Center Motel residential building is the only remaining residence on the block. The property did not originally contain the bungalow style strip of motel units that exists today immediately east of the residential building.

In 1929, the Los Angeles City Directory refers to the building located at 6722 Sunset Blvd as "Nelsey Place." Also in the same year, an LA Times article...

B11. Additional Resource Attributes:
(List attributes and codes) HP05

B12. References:
1929, 1942, 1956 Los Angeles City Directory
1913, 1951 Sanborn Map
Los Angeles Department of Building and Safety, Permit No. 17619

B13. Remarks:

B14. Evaluator: Jenna Snow

Date of Evaluation: 12/18/2008
B10. Statement of Significance (continued): notes that actress Myrtle B.M. Pierce of Chicago resided at 6722 Sunset Blvd. She married New York actor Claude Reese Isaacs in August of 1929. The 1929 City Directory does not list this address among its "Furnished Rooms, Boarding, and Lodging Houses," indicating that the motel component had not yet been added to the property.

In 1942 the Los Angeles City Directory refers to 6720 Sunset Blvd as "Nelsey Court," indicating that the motel units located at 6720 were called "Nelsey Court" and the residence located at 6722 was called "Nelsey Place." The 1942 Directory indicates that May L. Krigbaum was the manager of Nelsey Court where she also lived.

In 1956, 6720 Sunset Blvd appears in the Los Angeles City Directory under the name "Hollywood Center Motel." In the same year, residents of 6722 and 6722 3/4 Sunset Blvd (presumably the c. 1901 residential building) were Vampa A Jr. and Franz Kreisinger.

In 1956, the owner listed on the building permit for erection of two walls with attached neon signs (extant) is Theo J. Ticktin of Consolidated Leasing Corporation, 1445 N. Las Palmas. Site plans attached to the permit indicate that the early 2-story residential building located on the southern portion of the property was used as a motel office building. The two other buildings that existed on the property in 1956 were the 1-story motel building located at the southwest corner of the lot and the 1-story motel building located at the northeast corner of the lot. However, Sanborn maps from 1951 indicate that four single-story bungalow motel units were extant on the east side of the property in 1951. These buildings are extant today, indicating all buildings were not drawn in the 1958 building permit site plan.

The Hollywood Center Hotel was used as one of many Hollywood and Los Angeles film locations for the 1997 feature film adaptation of James Ellroy's novel, L.A. Confidential.

Although this property has a rich history as a motel, this property appears most significant as the oldest extant building in Hollywood. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of 1910.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This building was likely constructed as a single-family residence in 1919 and later converted into an office. In 1919, a building permit was issued to owner/contractor Harris E. Newton of 1811 N Western Ave for construction of a single-story, 5-room, single family dwelling at 6634 Sunset Blvd. Cost of construction was $3,000 (LA Building Permit No. 8005). No architect is listed on the permit. In the same year, a permit was issued to the same owner for construction of a single-story auto barn on the same property. Cost of construction was $100 (LA Building Permit No. 8006). In 1920, a single-story shed was constructed for owner Dr. J.A. Roberts of the same address (LA Building Permit... (This space reserved for official comments.)
B10. Statement of Significance (continued): No. 24188). Dr. Roberts had a laboratory at this address in which he collected and distributed guinea pigs for use in hospitals and laboratories. He had many advertisements in the LA Times in and around the year 1920 offering money in exchange for guinea pigs. The advertisement notes that he needed 250,000 guinea pigs yearly ("Display Ad 101," LA Times, 26 Sep 1920, II12). In 1921, a permit was issued to Roberts, whose home address had by this year changed to 6620 Sunset Blvd (same property as 6634 Sunset Blvd), for construction of a one bedroom and bathroom addition to the residence located at 6634 Sunset. While Roberts is listed as the owner on the permit, the permit is signed by Harris E. Newton, the original property owner listed on the 1919 building permit, indicating both Roberts and Newton owned the property (LA Building Permit No. 16568). In 1934, a permit was issued to owner Security First National Bank of 6th and Spring Streets to replace the roof on the existing dwelling with a composition roof (LA Building Permit No. 10348). In 1934, an advertisement appeared in the Los Angeles Times for an auction of the complete furnishings of six rooms at 6634 Sunset Blvd on Monday, Feb 5th at 10am. Items being auctioned included: Birch New York baby grand piano, Majestic Radio, living, dining, and bedroom furniture, imported and domestic rugs, etc ("Display Ad 13," LA Times, 4 Feb 1934, 14). The building was at some point converted from a dwelling to an office. The 1936 LA City Directory indicates that a dentist, Vinson A. Soderberg of 925 Cloverdale Ave, had an office on the property. In 1937, a permit was issued to owner Dr. Buell Sprague of the same address to expand the existing office building from 6-9 rooms (LA Building Permit No. 4281). Another permit was issued in the same year to Sprague to alter the existing property. The permit notes that the present building was a single-story residence and the building after alteration would be an office. Total valuation of proposed work was $5,000. Although this is an alteration permit, the description of proposed work reads, "Alteration of present buildings covered by other permit. This permit covers new class "C" building - see plan." (no plans were found with permit; LA Building Permit No. 9427). Also in 1937, a permit was issued to the same owner for construction of a bay window on the front of the building at the 2nd floor level (LA Building Permit No. 27836). This is the first mention that the building is two stories, indicating that the original dwelling-turned-office building was either added to or demolished and rebuilt prior to 1937.

It is likely that the dwelling erected in 1919 is the same, although altered, building that exists today. The original dwelling erected in 1919 contained 5 rooms and the 1921 addition added one bedroom for a total of 6 bedrooms. The 1934 auction indicates that the dwelling was still a 6-room dwelling in 1934. If the 1919 building was torn down and reconstructed as the existing office building, it is likely that this happened between 1934-1937.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February 1910.

(This space reserved for official comments.)
B10. Statement of Significance (continued): single-family houses and large multi-family housing during the 1920s. Throughout the 1930s, residential development in the survey area occurred at a much slower pace as it was limited to infill on scattered sites that had not yet been developed. However, in the decade and a half following World War II, the pace of residential development in Hollywood once again accelerated. The increase in development in the postwar years reflected both a generalized building boom that was occurring nationwide in the postwar years but also a more intensely localized building boom unique to the Los Angeles region. As growth of single-family residential areas moved further out from the city center, dense multi-family development occurred as infill in areas of the city that had previously been considered suburban in character. The building exhibits character defining features of a postwar apartment building, including a modern style aesthetic, a stucco finish with stone panels, underground parking, a butterfly roof, and a donut shape with an interior pool. While this property is located within the boundaries of a potential historic district, it responds to the scale of the surrounding development.

This courtyard apartment appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. The construction of courtyard housing allows speculative landowners to develop their parcels at higher densities than that afforded by the construction of a single family home. Courtyard apartments, arranged around a central landscaped area, allowed tenants exterior space that provided additional privacy.

The building located at 7070 Franklin Avenue was originally constructed in 1958 as an apartment-hotel with 51 apartments and 14 guest rooms for owner/contractor Merton Baker of 1675 Amberwood Drive, So. Pasadena. The building was arranged in an L-shape, forming a semi-enclosed courtyard around a swimming pool. The total valuation of proposed work was $335,900. The architect was Rochlin & Baran and the engineer was Kenneth Iwata. Permits were issued for construction of the pool in the same year at a cost of $5,000. The building permit for construction of the pool lists the owner as "Fireside Manor Motor Hotel / M.E. Baker."

This building appears significant as an excellent example of... (continued on next page)

Period of Significance: 1956 Property Type: Multi-family Resident Applicable Criteria: C/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The 27-unit apartment house located at 7104 Franklin Ave was constructed in 1956 for owner Minit Investment Company of 3425 W. Florence for $98,000. It was originally designed to contain 27 dwelling units and one guest room. 18 parking spaces were originally accommodated on the lot. No architect is listed on the original building permit. The engineer was Tom Woodward. The swimming pool was constructed in the same year for owner Minet Investment Company (Mr. Anicete Landeros), designed by architect J.A. Murrey and built by contractor Cliff M. Hall of 5345 Craner Ave for $3,030.

This building appears significant as an excellent example of a postwar apartment. Development pressure to...(continued on next page)

B10. Statement of Significance (continued): more intensively develop the land caused the area to become largely built out with small, single-family houses and large multi-family housing during the 1920s. Throughout the 1930s, residential development in the survey area occurred at a much slower pace as it was limited to infill on scattered sites that had not yet been developed. However, in the decade and a half following World War II, the pace of residential development in Hollywood once again accelerated. The increase in development in the post-war years reflected both a generalized building boom that was occurring nationwide in the post-war years but also a more intensely localized building boom unique to the Los Angeles region. As growth of single-family residential areas moved further out from the city center, dense multi-family development occurred as infill in areas of the city that had previously been considered suburban in character. The building exhibits character defining features of a postwar apartment building, including a Modern style aesthetic and a stucco finish and rock panels, horizontal orientation, fenestration that wraps around the building's corner, and a donut shape with an interior pool.

Context: Residential Development and Suburbanization, 1850-1912 Theme: Annexation and Consolidation, 1895-1910; Context: Architecture, Engineering and Designed Landscapes, 1850-1912 Theme: Late 19th/Early 20th Century Residential Architecture, 1885-1910

Period of Significance: 1910 Property Type: Single Family Residence Applicable Criteria: A/1, C/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

B10. Statement of Significance (continued): 1910. Building permits were not available for this property.

This property also appears significant for its unique architectural design. As described in the 1984 survey, this building is "One of the most picturesque Craftsman ear dwellings in Hollywood." Features that contribute to the composition include wide bargeboards with flared edges, a keyhole window below the gable peak, and wide, two bay front porch.

DPR 523A (1/95) *Required Information
The Hollywood Biltmore was completed in 1958. The original owner was architect Kenneth Lind, who also designed the structure. The building was originally designed as an apartment-hotel with patios and balconies, central pool and patio, complete air conditioning, and a circular glass and marble lobby. W & J Sloane of Beverly Hills was the interior decorator. The total cost of construction was over $1,000,000.

This building appears significant as an excellent example of a Postwar Apartment House. It was constructed in response to the same development pressures. Development pressure to more intensively develop the land caused the...(continued on next page)

**Property Type:** Single Family Residence

**Applicable Criteria:** A/1

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1930, a permit was issued to owner W.W. Hampe (spelling of last name unclear on permit) for erection of a 3-story, 42-room, 18-family apartment building. Total valuation of proposed work was $48,000.

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living...(continued on next page)

Los Angeles Department of Building and Safety, Permit No. 9811.

**B13. Remarks:**

**B14. Evaluator:** Jenna Snow

**Date of Evaluation:** 11/04/2008

(This space reserved for official comments.)
B10. Statement of Significance (continued): arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

This property also appears significant as an important example of Spanish Colonial Revival architecture. What we now call Spanish Colonial Revival style is really the second phase of a larger, more encompassing style which began in the 1890s and 1900s. Developing alongside a national trend of high style, academic architects employing historic eclectic styles, Spanish Colonial Revival style, in the broadest sense of the term, was an attempt to create and define a prototypical Californian expression of architecture. Based on designs for the California Missions, the aim of the earlier phase of Spanish Colonial Revival style, what is now called Mission Revival style, was to transmit a romantic myth of California’s European origins. The academic, high style expression of Spanish Colonial Revival style was popularized by the Panama-California Exposition of 1915 in San Diego. Typical of buildings in this style, this property has an asymmetrical composition, a low-pitched, red-tile roof and stucco wall surface, sometimes interrupted by arched openings. It also exhibits other defining decorative elements, which derive from the full range of Spanish history, incorporate Moorish, Byzantine, Gothic, Renaissance, and Latin influences, including decorative open railings and wooden security grills, and stucco decoration along the cornice.

DPR 523A (1/95) *Required Information
In 1932, a permit was issued to owner Hobart Beck of 7045 Lanewood Ave for construction of a 26-room, 8-family apartment building located at 7051 Lanewood Ave. Total valuation of proposed work was $14,000. A private garage and laundry room was constructed in 1932.

This building appears significant as both an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population as well as for its distinctive use of the Spanish Colonial Revival style. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large...(continued on next page)
B10. Statement of Significance (continued): cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers.

While many residential buildings were constructed in the Spanish Colonial Revival style during this time period, this property is a particularly excellent example of the style. What we now call Spanish Colonial Revival style is really the second phase of a larger, more encompassing style which began in the 1890s and 1900s. Developing alongside a national trend of high style, academic architects employing historic eclectic styles, Spanish Colonial Revival style, in the broadest sense of the term, was an attempt to create and define a prototypical Californian expression of architecture. The 1890s -1930s was a period in which historic eclecticism was the dominant mode of architectural expression. The academic, high style expression of Spanish Colonial Revival style was popularized by the Panama-California Exposition of 1915 in San Diego. The L-plan layout of the subject building provides more streetfront elevations to showcase stylistic elements, including the tower, balconies, and stairways with decorative elements, and arched openings.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

A permit was issued in March of 1923 for erection of a 2-story, 7-room, single family dwelling at 7045 Lanewood Ave for owner/builder H.J. Beck of 7106 Hawthorne Ave. The architect listed on the permit is Harold Dunn of Monrovia. The total valuation of the proposed work was $7,000. A permit was issued for construction of a 3-room private garage on the same property for the same owner at a cost of $300 in the same year.

This property appears significant as the one of the only remaining single-family residence in close proximity to Hollywood Boulevard. While residential development in Hollywood during the first decade of the twentieth century had focused on Prospect Avenue...(continued on next page)

B10. Statement of Significance (continued): (present-day Hollywood Boulevard) due to its proximity to streetcar lines, by the 1920s, development was widespread throughout the area in response to the automobile. According to Sanborn Maps (corrected through 1951), 7045 Lanewood Ave is situated on a block originally comprised mostly of similarly scaled, single family residences with the same setback from the street. 7045 Lanewood contains the only remaining building on the block originally designed as a single family residence. Two multi-family buildings from the same era, designed in the Spanish Colonial Revival style, remain and are located at 7051 Lanewood Ave (built 1932) and 7063 Lanewood Avenue (built 1930).

This courtyard apartment appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. The construction of courtyard housing allowed speculative landowners to develop their parcels at higher densities than that afforded by the construction of a single family home. Courtyard apartments, arranged around a central landscaped area, allowed tenants exterior space that provided additional privacy.

Property Type: Multi-family Property  Applicable Criteria: A/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

Context: Residential Development and Suburbanization, 1913-1945 

Property Type: Multi-family Residential 
Applicable Criteria: A/1 

Period of Significance: 1924 

This flat is significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistances towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence. This property, designed in a Spanish Colonial Revival style, articulates...(continued on next page)

B10. Significance: Area: Los Angeles Theme: Mid-Century Modern, 1946-1964
Context: LA Modernism, 1946-1964

Period of Significance: 1963 Property Type: Bank Applicable Criteria: C/3
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1964, a Certificate of Occupancy was issued to owner Guardian Bank of 818 N. La Brea for the 1-story, type V, 60' x 119' bank with 18 parking spaces located at 7014 Sunset Blvd. In 1963, Guardian Bank was a new, independent Hollywood Financial Institution with Sherwin L. Memel as chairman of the board. Irving D. Shapiro & Associates was the building architect, John Follis & Associates designed the bank interiors and Fellows Construction Company, Inc. was the contractor. A 1963 Los Angeles Times article describes the architecture: "The 2-story, glass-enclosed building features a driveway under the building from Sunset Blvd. to the bank's parking areas. The Sunset Blvd. facade feature... (continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): is designed to reveal the interior, emphasized by a 20-ft glass enclosure. The banking area occupies 7,300 sq ft, and a mezzanine floor containing officers board rooms has 1,970 sq ft. A second article about the building further elaborates: "A community room, designed with a separate entrance and open to local organizations, will be provided. The bank vault is exposed to view and surfaced with polished, travertine tile. The bank's symbol, in metal bas-relief, highlights the outer vault surface, visible from Sunset Blvd. Reflecting pools are located in entry areas". A 1963 advertisement for the Guardian Bank notes that Guardian Bank was the only independent bank in Hollywood at the time.

This property appears significant for its Mid-Century Modern architecture as well as for its association with architect Irving Shapiro. What is now known as Mid-Century Modern architecture was a continuation of Modern movements that came earlier and much is an amalgamation of architectural expressions from an earlier period, including the International and Bauhaus styles. The most notable architects combined new architectural solutions to integrate traditional precedents into a style that moved the entire field of architecture, and sometimes public consciousness, in a new direction. Modernism became the pre-eminent design solution from about 1932 to about 1984 for commercial buildings. While they were largely unsuccessful in convincing developers to adopt the modern style for residential buildings, Modern architects found commercial clients who were willing to adopt a modern style to distinguish their buildings. Like other examples, this building is characterized by a simplification of form and elimination of ornament. Other character-defining features include its flat roof, deep roof overhang, and a mix of masonry and glass exterior cladding.

Irving D. Shapiro, of Irving D. Shapiro & Associates, received his BA and MA degrees in Architecture from UC Berkeley in 1949 and 1950, respectively. Prior to establishing his own architecture and land use planning firm in Beverly Hills, Shapiro attended Columbia University where he received an MBA in real estate in 1956 and a Ph.D. in urban land economics in 1961. This building is one of two early projects located on Sunset Boulevard in Hollywood, the other an office building located at 7033 Sunset Boulevard. Shapiro also designed the Columbia Savings & Loan Association building, located at 5220 Wilshire Boulevard in 1965. At around the same time, Shapiro’s firm was also involved in designing a high-rise office building (MacArthur-Broadway Building) in Oakland, California. In 1965, the Shapiro firm won a Merit Award from the National Prestressed Concrete Institute for their Oakland project. Other projects of the firm included: Anaheim Towers project (1964, may have been demolished), Bank of California Building in San Bernardino (1967) and a regional shopping complex in Honolulu, Hawaii (1968).

b. Builder: J. LeRoy Moser

B10. Significance: Area: Los Angeles

Theme: Multifamily Development in Hollywood, 1911-1945

Context: Residential Development and Suburbanization, 1913-1945

Property Type: Multi-family Residential

Applicable Criteria: A/1

Period of Significance: 1922

Three permits were issued in 1921 for construction of three 2-story residential buildings at 1351-1355 La Brea Ave to owner Dr. F. Traughfer of 1326 La Brea. Two of the buildings were originally constructed as 8-room, 4-family residential buildings and the third building was originally constructed as an 8-room 3-family residential building. Each building was constructed at a cost of $6,000. No architect is listed on the permits. The contractor was J. LeRoy Moser of 8335 Sunset Blvd.

This bungalow court appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to...(continued on next page)

This property appears significant as an important example of the Craftsman style. Popular from the early 1900s through the 1920s, the Craftsman style utilizes design elements of the Arts and Crafts style and represented a conscious search for the supposed simplicity of pre-Industrial times. The bungalow's simplicity of form, informal character, direct response to site, and extensive use of natural materials, was a regional interpretation of the socio-economic and aesthetic reforms espoused by the Arts and Crafts Movement's founder, William Morris. Although modest in size, this property demonstrates most character-defining features, including a low-pitched roof with wide, exposed eaves... (continued on next page)

       Context: Residential Development and Suburbanization, 1850-1912 Theme: Annexation and Consolidation, 1895-1910

   Period of Significance: 1911 Property Type: Single Family Residence Applicable Criteria: A/1
   (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears significant as an excellent example of an increasingly rare property type. Single family residences from the pre-annexation period of Hollywood appear particularly significant as an important pattern of development, illustrative of Hollywood’s early development as an independent city. Although residential development began a few years earlier, Hollywood became an independent city in 1903. By 1909, Hollywood experienced growth on an exponential scale, with a population increase of 700 in 1903 to 4,000 in 1909 and accompanying difficulties supplying services to residents. As a result of its growing pains, Hollywood became a district of Los Angeles in February of...(continued on next page)

B10. Significance: Area: Los Angeles  Theme: Revival of Colonial Styles: The Search for Identity 1913-1945

Context: Architecture, Engineering and Designed Landscapes, 1913-1945

Period of Significance: 1920  Property Type: Single Family Residence  Applicable Criteria: C/3

In 1920, permits were issued to owner S.L. of 7101 Sunset Blvd for erection of a 6-room single family dwelling and 1-room garage at 1342 La Brea Ave. The dwelling was originally designed as a single-story structure with a brick chimney and shingle roof, constructed at a cost of $4,000. The garage was constructed at a cost of $100 (LA Building Permit No 775-76). Permits were also issued in the same year for construction of a 6-room, single-family dwelling and 1-room garage located nearby at 1307 La Brea Ave for the same owner and constructed by the same contractor. (LA Building Permit No 777-78).

This property appears to be a particularly fine, albeit modest, example of Colonial...(continued on next page)

B13. Remarks:

B14. Evaluator: Jenna Snow

*Date of Evaluation: 11/06/2008
B10. Statement of Significance (continued): Revival architecture in a single-family residence. The Colonial Revival style resulted from a rejection of the Classical Revival style, and a desire to return to a more “traditional” American building type. The style took on added popularity with the restoration of Colonial Williamsburg in the 1920s. This style draws from the simple building forms typical of early American colonial structures, and elements of classical or Georgian architecture. Although modest in size, this property demonstrates most character-defining features, including a symmetrical composition of the facade, an accentuated front door, extended forward into an entry porch supported by slender columns, and grouped windows. Rezoned for commercial use in the 1920s, this formerly single-family residence is a remnant of a neighborhood that has since made way for commercial buildings.

DPR 523A (1/95)  *Required Information
Permits were issued in 1952 for construction of the apartment building and garage located at 1311 N. Orange Drive. The building was originally designed as a 2-story, frame-and-stucco, 8-family, 16-room apartment house for owner/contractor Louis H. Kelman & Son of 1118 S. Oakhurst Drive. The permit is signed by Carl K. Kelman. Cost of construction was valued at $460,250. No architect or engineer are listed on the original permit.

This postwar multifamily apartment building appears significant for its highest quality of architectural design and epitomizes its property type. Two stories in height and L-shaped in plan, an exterior stair gives access to an exterior corridor covered by...(continued on next page)
B10. Statement of Significance (continued): an extension of the gable roof. This property uniquely combines Colonial Revival decoration, as seen in the broken pediments over ground floor windows on the facade, with Moderne decoration, as seen in the decorative wood bands on the facade and angled porch column.

This property appears significant as an important example of the Craftsman style. Popular from the early 1900s through the 1920s, the Craftsman style utilizes design elements of the Arts and Crafts style and represented a conscious search for the supposed simplicity of pre-Industrial times. The bungalow's simplicity of form, informal character, direct response to site, and extensive use of natural materials, was a regional interpretation of the socio-economic and aesthetic reforms espoused by the Arts and Crafts Movement's founder, William Morris. Although modest in size, this property demonstrates most character-defining features, including wood shingle siding and a wide front porch...(continued on next page)

### B10. Significance: Area: Los Angeles | Theme:

**Period of Significance: 1923** | **Property Type:** Multi-family Residential | **Applicable Criteria:** A/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

On 4/23/1923, a permit was issued to owner G.C. Rumions for erection of the 2-story, 50-unit, U-shaped apartment complex located at 1800 El Cerrito Place. Total valuation of proposed work was $75,000.

This apartment building appears significant as an excellent example of a property type that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Despite the pervasive American ideal of single family ownership evidenced at the turn of the twentieth century, there was, nonetheless, a growing trend in large cities across the nation towards people living together in collective dwelling arrangements. Initial, the communal living...(continued on next page)

(This space reserved for official comments.)
B10. Statement of Significance (continued): arrangements of apartment living aroused much suspicion among the middle class as being morally suspect, a concern from which Hollywood was not immune. During the 1920s, Hollywood was undergoing rapid urbanization parallel with a significant rise in population density and apartment housing became an increasingly attractive option to both prospective tenants as well as to speculative land developers. Typical of the property type, this building is three stories tall, masonry construction, and designed to fill as much of the lot as feasibly possible with a configuration in the shape of an U, arranged around a central landscaped area.

Permits were issued for erection of the Highland Gardens Hotel in 1955 for owners M. Horowitz and R. Larson of 8052 Beverly Blvd. Originally designed as an apartment/hotel with 2 irregularly shaped 2-story buildings, one containing 46 units (32 dwelling units and 14 guest rooms) and a subterranean garage and the other containing 22 units, arranged around a triangular courtyard with an adjacent 2-unit apartment house and garage located on the same property. It contained a main driveway parallel to Franklin with access from Franklin Ave and Scamore Ave. The total cost of all three buildings was $473,300. The 1960 LA City Directory lists the hotel under the name "Hollywood Landmark Hotel..." (continued on next page)

DPR 523B (1/95)

This property appears significant both for its Mid-Century Modern architecture as well as important hangout for musicians and other people in the entertainment industry. Similar in appearance to post-war apartment buildings, this building exhibits the highest quality of design and appears similar to post-war apartment buildings. Like a post-war apartment building character defining features include a Modern style aesthetic and a stucco finish, horizontal orientation, wide, overhanging eaves, and a donut shape with an interior pool.

In addition to its high quality design, this building was where many Hollywood entertainers, such as the New York City Ballet Company, Ice Capades, Sergio Mendes, Roger C. Carmel, Frank Zappa, The Jefferson Airplane, Alice Cooper, Otis Redding, the Chambers Brothers and more stayed. Magicians from the Magic Castle (located adjacent to the motel) would often come and perform impromptu magic shows by the hotel pool. Janis Joplin overdosed and died in room 105 in 1970.

P3a. Description (continued): driveway
In 1928, permits were issued to owner/architect/contractor Edwin C. White to move an existing single-family residence (unknown construction date) located at 5727 Carlton Way to make way for erection of a 2-story, 12-room, 4-family apartment building with stucco exterior walls and a 1-room garage. The single family residence was moved to the back of the lot and the apartment building was constructed at the front of the lot. Both buildings are extant. Total valuation of new building construction was $8,000 for the apartment building and $500 for the garage.

This flat is significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an...(continued on next page)
B10. Statement of Significance (continued): important pattern of dense, urban development to accommodate a rapid increase in population. Well into the 1920s, apartment buildings of any kind were typically viewed as an intrusion within areas previously established as neighborhoods comprised of single family residences. Perhaps because of the resistance towards multifamily residential buildings during this period, a couple of different strategies were employed to make their primary façade appear more like a single family residence. Designed in a Mediterranean Revival style, the primary façade recalls the imagery of an individual single-family residence.

DPR 523A (1/95)  *Required Information
In 1923, permits were issued to owner J.J. Sherlock of 704 Pacific Finance Building for erection of a single-story, 20-room, 10-family bungalow court and a garage located at 5731-37 Carlton Way. The architect/contractor for both were Sherlock-Kitts Co. of 704 Pacific Financial Building. Total valuation of proposed work for the bungalow court was $12,500 and for the garage was $400.

This bungalow court appears significant as an increasingly rare example of a formerly ubiquitous property type in Hollywood that represents an important pattern of dense, urban development to accommodate a rapid increase in population. Designed in a Spanish Colonial Revival style, the property...(continued on next page)
B10. Statement of Significance (continued): exemplifies character-defining features of a bungalow court including multiple, semi-dethatched buildings on a single residential lot arranged around a landscaped courtyard.

Period of Significance: 1963 Property Type: Apartment Applicable Criteria: C/3
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

A Certificate of Occupancy was issued to owner Swartz & Kahan of 22030 Sherman Way, Canoga Park, CA for ownership if the 3-story, type V, 15 x 100' & 155' x 180' apartment house with 50 apartments and attached garage on 7/20/1964.

Designed as a place for "modern living" the Carlton Towers apartment building located at 5741 Carlton Way was originally created as a Medallion Apartment. According to a 1964 advertisement in the Los Angeles Times, Medallion homes and apartments featured a variety of built-in modern conveniences, such as a flameless electric kitchen complete with major electric appliances, full house power, and modern planned lighting. Approximately 30 homes and apartment...(continued on next page)

"Open House Slated for Apartment," Los Angeles Times, 12 Apr 1964, 120

B13. Remarks:

B14. Evaluator: Tanya Sorrell

Date of Evaluation: 01/29/2009

(This space reserved for official comments.)
B10. Statement of Significance (continued): buildings located in Los Angeles were listed in the advertisement as Medallion home models one could visit. Other Medallion apartment buildings in Hollywood listed in the advertisement are: Executive House of Hollywood (2212 N Cahuenga Blvd), The Maplewoods (5025 Maplewood Ave), Manhattan Park (345 S. Manhattan Pl), and the Vista Los Feliz Condominium (4343 Finley Ave). In addition to its interior amenities, the Carlton Towers was originally designed with an elevator, large heated pool, some private balconies, air conditioning, a recreation room and cabana, a laundry room, and waste chutes on each floor.

This postwar multifamily apartment building appears significant for its highest quality of architectural design and epitomizes its property type. Development pressure to more intensively develop the area caused the area to become largely built out with small, single-family houses and large multi-family housing during the 1920s. Throughout the 1930s, residential development in the survey area occurred at a much slower pace as it was limited to infill on scattered sites that had not yet been developed. However, in the decade and a half following World War II, the pace of residential development in Hollywood once again accelerated. The increase in development in the post-war years reflected both a generalized building boom that was occurring nationwide in the post-war years but also a more intensely localized building boom unique to the Los Angeles region. As growth of single-family residential areas moved further out from the city center, dense multi-family development occurred as infill in areas of the city that had previously been considered suburban in character. The building exhibits character defining features of a postwar apartment building, including a Modern style aesthetic with a stucco finish and horizontal orientation. Three stories in height, the building has what appears to be floating arches above the roofline and balconies in a wave-like shape.
